Be sure to read this Catalogue & Website

IN NO EVENT SHALL DENSO BE LIABLE FOR ANY LOSSES, EXPENSES OR DAMAGES WHATSOEVER RESULTING FROM ANY OF THE FOLLOWINGS;
- FAILURE TO COMPLY WITH THE WARNING OR PRECAUTIONS DESCRIBED IN THIS CATALOGUE AND WEBSITE,
- ANY USES OTHER THAN THE APPLICABLE USE DESCRIBED IN THIS CATALOGUE AND WEBSITE, and
- ANY TROUBLE NOT ATTRIBUTABLE TO DENSO SPARK PLUGS.

※"Spark plugs" means any type of DENSO's spark plugs, including but not limited to Iridium Power, Iridium TT, Iridium Racing, Iridium Plus, and Iridium Tough, Iridium Long Life, Double Platinum, U-Groove, Resistor, Standard, Nickel TT, Platinum TT, Two-Tops.

WARNING (Prohibited Usage)

- Never use DENSO spark plugs in the engines for any aircraft, including airplanes, helicopters, gliders and drones. The DENSO spark plugs sold are not designed and manufactured for any aircraft: use may result in a plane crash or other accidents due to engine malfunction.
- Never use DENSO spark plugs, listed in this catalogue, in the engines for generator and gas heat pump air conditioning system. The DENSO spark plugs we sell are not designed and manufactured for such use, so that such use may result in accidents, including power generation stop or heat generation stop.
  A separate catalogue for DENSO spark plug specifically designed for generators (gas engines) is available. Please contact your DENSO representative for more information.
- Never use DENSO spark plugs for gas burner ignition. The DENSO spark plugs we sell are not designed and manufactured for such use, so that such use may result in ignition failure or equipment damage due to overheating.

WARNING

- Be sure to turn off the engine and disconnect the battery before replacing or adjusting the plugs. Failure to heed this warning may result in a fire, an electric shock and/or bodily harm.

Spark Plug Handing Precautions

- Always refer to the vehicle manufacturer's repair manual for specific installation procedures.
- Carefully read the instructions and precautions on the package, catalogue and website.
- Do not drop spark plugs. This may cause the spark plug to crack internally or the gap to be narrowed, preventing it from functioning correctly.
- If Spark Plug needs to be gapped, bend from the back of the ground strap with appropriate tools. Do not physically adjust gap using the center electrode as leverage. Check gaps with care, not to damage the center electrode. Gap to the vehicle specific manufacturer's recommendation unless otherwise recommended.

Modified Vehicles and Tuning Precautions

- DENSO will not bear any responsibility whatsoever for any trouble arising from mechanically or electronically modified engines or vehicles.
- It is the user's judgement and responsibility to check the specifications required for modified engines, which includes and not limited to, gapping, heat ranges, reach, projection, and/or clearances with valves and/or pistons.

Catalogue & Website Precautions

- Precautions for cross reference and product tables showing other manufacturer's spark plugs:
  - Use for reference only. Table does not guarantee the performance of spark plugs when installed in the vehicles if plug was specified using cross references. Always check the applications section for DENSO recommended plugs.
  - The spark plug specifications (construction, material, etc.) differ from one manufacturer to another.
  - Select a suitable type of spark plug from the vehicle application table. If not listed on the table, please check with your DENSO Representative.
- The contents of the catalogue and website are updated on a regular basis, but they cannot account for daily dynamic changes such as new applications and or OE supersessions. If there is an issue with the information, please contact your DENSO Representative for further assistance.
- Consumption tax and installation fees are not included in the price of the product.
- Some spark plugs on this catalogue and website are manufacturer's genuine parts that listed for reference and cannot be directly sold. Please contact your DENSO representative for further assistance.
- The appearance and specifications of the product are subject to change without prior notice.
- The images of spark plugs indicated in the catalogue and website are conceptual diagrams, and sometimes differ from the actual products.

Precautions for selecting spark plugs.

When selecting an appropriate type of spark plug, check the vehicle manual, the maintenance manual and the application table in this catalog, and select spark plugs with the correct dimensions and heat range.

Know-how concerning spark plug selection

Normal vehicle

- Basically, use a spark plug that has a standard heat range. Note, however, if this type of spark plug is used for traveling at low speed or traveling over short distances, resulting in the occurrence of carbon fouling, it is recommended that you use spark plugs that have a low heat range.
- Do not use a non-resistor type plug in an engine for which a resistor type plug is specified. This may result in engine trouble due to noise accompanying the spark discharge.
- If you install extended type spark plugs (J, QJ, KJ, PKJ, SKJ, VKJ, TJ, etc.) in a non-desiganated engine, they may interfere with the valves and pistons, causing damage to the engine and the spark plugs.

Selection of the optimum heat range

Heat range	Applications
31	For preventing plug overheat
27	
24	
22	
20	For preventing carbon fouling / oil fouling

Low ◄——► High
Tuning level

Tuned or modified vehicle

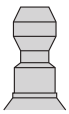
- In the case of a tuned or modified vehicle which has a modified engine, or one which uses a muffler, ignition coil, plug cords, turbo unit or commercially available electronic ignition system, or a NOS (*) for example, it is necessary to increase the heat range of the plugs to a value that matches the tuning level. If you do not select the plugs correctly, trouble such as carbon fouling / oil fouling or pre-ignition (a naturally occurring phenomenon in which combustion occurs prior to the emission of a spark from the plug) will occur, which may result in a breakdown of the vehicle.
  (*) NOS: A device which injects nitrous oxide together with gasoline into the air intake in order to increase the engine power
- When using a tuned vehicle or a modified vehicle, select a heat range using your own judgment and at your own responsibility.

When using Iridium Racing plugs

- Iridium Racing plugs are intended for racing and also for tuning up. Set the heat range of the plugs to match the tuning level, based on the heat range of the standard plugs or Iridium Power plugs.
- Generally, a plug that protrudes into the combustion chamber has superior ignition performance, resulting in improved engine performance. On the other hand, this type of plug is liable to be exposed to the high-temperature combustion gas, and also the length of the grounding electrode increases, reducing the heat resistance and durability of the plug. For this reason, the higher the tuning level becomes, the greater is the necessity to use a type of plug that has a recessed electrode.
- Generally, when the tuning level rises, the necessity of using high heat range plugs increases.
- When using Iridium Racing plugs, select them according to your judgment and at your own responsibility.

Using a plug fitted with a terminal nut

If you use a plug fitted with a terminal nut when the terminal nut is loose, the engine is likely to malfunction. If the part No. of the plug includes the notation "R" alongside "Terminal shape" or "NUT," and the plug is used with the terminal nut fitted, securely tighten the nut using pliers, or the like. In the case of a plug whose part No. includes the notation "RC" alongside "Terminal shape" or "NUT," the terminal nut is crimped and will not work loose under normal applications. However, if vibration of the engine and/or the plug cord is severe, the nut may on rare occasions become loose. Keep this possibility in mind, and periodically inspect the nut. If it is loose, re-tighten it securely.

S: Solid (integrated type)	R: Nut type (no crimping)	RC: Nut type (with crimping)	T: Screw type
			


The terminal cannot be removed.	The terminal can be easily removed.	You can remove the terminal nuts using pliers, or the like.	Terminal nuts are not provided.

Precautions to observe when installing the spark plugs

Recommended torque and angle of rotation

It is necessary to install the plugs in the engine using the correct torque. Note that if the torque is too low, the plugs are liable to work loose due to leakage of combustion gas or vibration, resulting in possible damage to the engine and the plugs. Conversely, if the torque is too high, the crimping between the insulator and the housing is liable to become loose, causing the integrity of the seal to be impaired or the mounting screw thread to break.

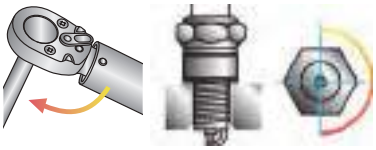
1. Use the correct wrench that matches the hex part of the plug. Take care not to damage the insulator.

2. When carrying out this work, take steps to ensure that oil, dust and foreign objects in the vicinity of the cylinder head do not enter the engine.

3. Before installing the plug, clean the mounting seat on the engine side, check that there is a gasket, and then insert the plug into the mounting seat.

4. When carrying out this work, hold the plug vertically, and then lightly tighten it by hand or by using a plug wrench.

5. Next, using a plug wrench, tighten the plug to the recommended torque or the recommended angle indicated in the table below.



If you tighten the plug to a greater rotation angle or torque than that indicated in the table below, the engine may become damaged or the screw thread of the plug may break, so be careful.

If you apply grease or another screw thread lubricant to the threaded part of the plug, you are liable to tighten the plug to an excessive degree, impairing the integrity of the seal, even if you apply no more than the recommended torque. For this reason, do not coat the plug with screw thread lubricant.

If you apply the plug wrench obliquely, an unreasonable force may be applied to the insulator, causing it to crack, as indicated in the figure below. For this reason, be careful not to hold the wrench obliquely.

Thread Size	Applicable Models	Recommended Torque	Recommended Tightening Angle	
			New Plug	Previously Used
M 8	All Types	8 -10N·m	About 1/3 turn	About 1/12 turn
M10	Types other than the ones shown below	10-15N·m	About 1/3 turn	About 1/12 turn

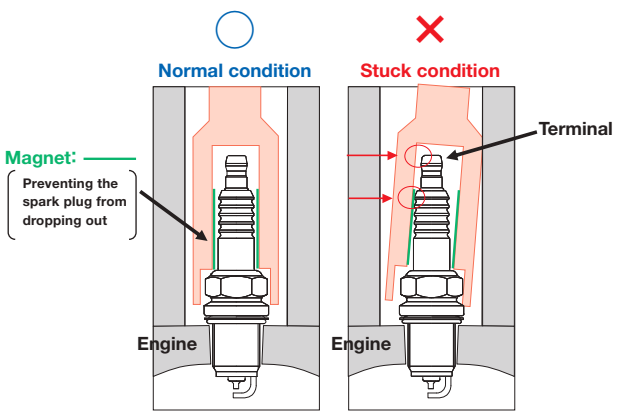
M14 (Gas)	If the cylinder head material is cast iron	20N·m	-	-
M14 (Gas)	If the cylinder head material is aluminum	N·m	-	-
M18 (Gas)	If the cylinder head material is cast iron	30N·m	-	-

(*1) VUH27ES, U24FER9S
(*2) IK16G, IK20G, IK22G, K20PR-U8S, K20PR-U9S, KJ20DR-M11S, PK22PR-L11S, SK20PR-N9S, SK22PR-M11S, SKJ20DR-M11S, VK16G, VK20G, VK22G

Cracking of the insulator

The plugs of recent engines are installed in deep plug holes, so it may be difficult to notice whether or not you are holding the wrench obliquely when installing or removing the plugs. However, if you turn the wrench in this condition, the head of the insulator may stick , causing an unreasonable force to be applied to it. As a result, the insulator is liable to crack.

*However, the mode of occurrence differs according to the construction and dimensions of the plug holes in the engine, and also the type of wrench used.



Regarding the spark plug replacement timing

The electrode progressively wears, causing the spark gap to increase, along with the increasing number of spark discharges. When the gap exceeds a certain limit, the sparking performance deteriorates, which may prevent stable ignition of the gas mixture. When this happens, the horsepower of the engine falls, the fuel economy deteriorates and also the quality of the exhaust gas is adversely affected, so it is necssary to replace the plugs. The table below shows our recommended plug replacement timing as a rough guide to the economic life of the plugs. The economic life may be reduced depending upon the vehicle running condition* and the sparking characteristics*.

Rough guide to the recommended replacement interval (economic life) for conventional spark plugs

Automobile	15,000 to 20,000km
Motorcycle	3,000 to 5,000km

Rough guide to the recommended replacement interval (economic life) for platinum plugs, Iridium Tough and Iridium Plus plugs

Automobile	up to100,000km *1
Motorcycle	There are no settings.

*1: The small engine vehicle, a tuned vehicle or a vehicle that uses a simultaneous ignition coil is often used at high speed. This may cause the life of the plugs to be reduced.

Rough guide to the recommended replacement interval (economic life) of Ni-TT plugs

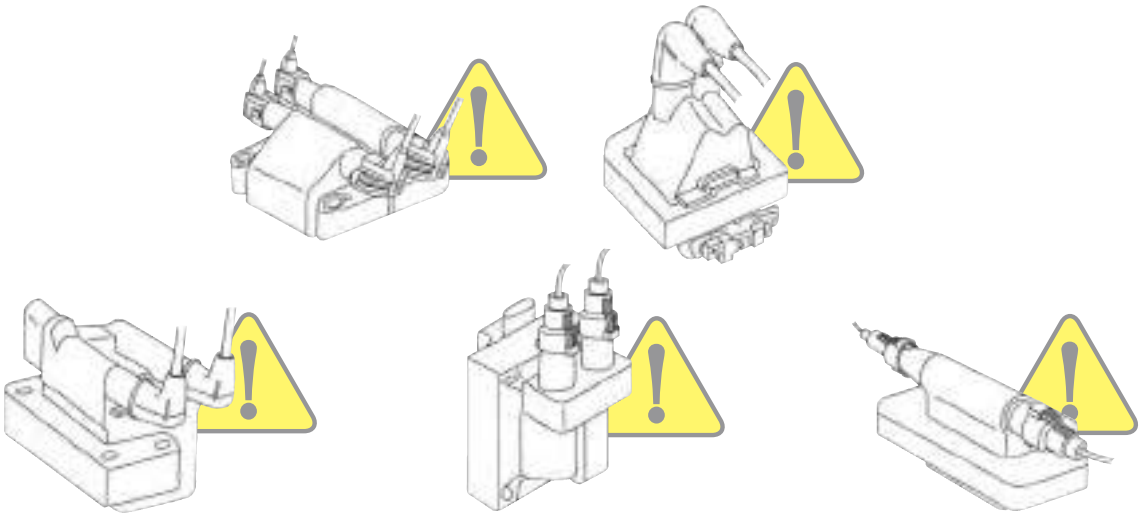
Automobile	15,000 to 20,000km
Motorcycle	There are no settings.

*Factors which shorten life

- Running condition: High-speed running, high-load running, hill climbing, extended idling (taxi), etc.
- Ignition characteristics: Simultaneous ignition, positive discharge, use of high-energy coil, etc.

Simultaneous ignition system

A simultaneous ignition system is an ignition system in which two plug cords are connected to one coil, as shown in the figure. A normal coil consists of a single coil which provides a high voltage to one plug. Generally, it employs a negative discharge that results in relatively low wear. In contrast, a simultaneous ignition system uses a single coil which must be capable of supplying high voltage to two plugs. A negative discharge occurs at one plug and a positive discharge occurs at the other plug, resulting in the generation of wasteful fire that is unrelated to combustion. For this reason, the electrode at which a positive discharge occurs tends to wear markedly.



Adjustment of the plug gap

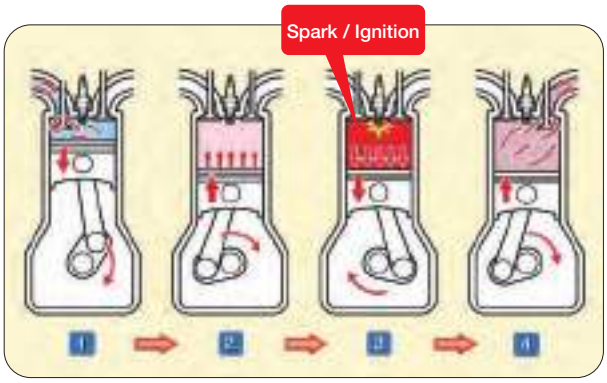
- If the center electrode becomes rounded or the grounding electrode wears unevenly, replace the plug with a new one.
- Do not adjust the gap of a plug that has a thin electrode, such as a platinum plug or an iridium plug, because this may result in damage to the center electrode.

BASIC INFORMATION FOR PLUG (1)

01 The role of spark plugs

DENSO spark plugs ignite your engine.

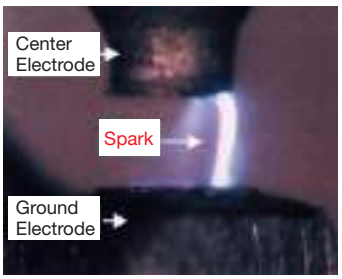
Gasoline engines generate power from the precision-timing combustion of a fuel-air mixture of gasoline and oxygen. However, gasoline itself is relatively difficult to ignite with the precision timing required for combustion of the fuel-air mixture, even at high temperatures. The role of the spark plug is to create a spark which ignites the fuel. Since the spark plug ignites combustion, the performance of the plug determines the performance of the entire engine. The engine is often likened to the "heart of a vehicle," and spark plugs have the significant role as the "heart of the engine."



02 Spark and Ignition

Generate a strong spark from an electrical discharge between electrodes

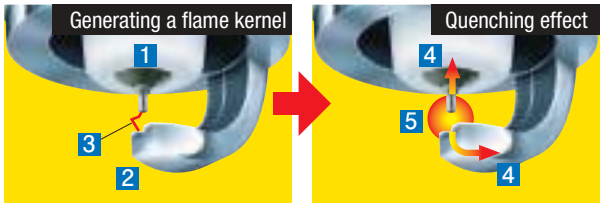
When high voltage produced by the ignition system is discharged between the center electrode and ground electrode of the spark plug, the natural insulation between the two electrodes breaks down, current flows as a result of the discharge phenomenon, and an electrical spark is generated.
The energy from this spark triggers the igniting and combustion of the compressed air-fuel mixture. The duration of this discharge is extremely brief (about 1/1,000 of a second) and is extraordinarily complex.



The role of the spark plug is to reliably generate a strong spark between electrodes precisely at each specific moment to create the trigger for combustion of the gaseous mixture.

The spark plug generates a flame kernel from a spark which then ignites the fuel

Igniting the fuel with an electrical spark occurs because fuel particles situated between the electrodes are activated by the discharge spark to trigger a chemical reaction (oxidation), the reaction generates heat, and a flame kernel is formed. This heat ignites the surrounding air-fuel mixture until a flame core is formed that spreads combustion throughout the chamber. However, the electrodes themselves absorb heat which can extinguish the flame kernel, called the "quenching effect." If the quenching effect between the electrodes is greater than the heat generated by the flame kernel, the flame is extinguished and combustion stops.
If the plug gap is wide, the flame kernel will be larger and the quenching effect is reduced, so reliable ignition can be expected. But if the gap is too wide, a large discharge voltage becomes necessary, the limits of coil performance are exceeded, and discharge becomes impossible.



1 Center Electrode 2 Ground Electrode 3 Flame kernel
4 Heat absorption 5 Flame propagation

03 How to Choose a Plug

Various circumstances such as engine conditions and driving conditions are rough measures for choosing a plug. For example, if strenuous driving is continued for a long time using normal plugs, the plug will overheat. This is why the idea of a regular plug for a regular car doesn't work. What's important is to inspect the condition of your current plugs, and then choose a plug accordingly.

Heat Range	Application
31	To prevent plug overheat
27	
24	Standard Plugs
22	
20	To prevent carbon fouling/ oil fouling

Low ⟷ High
Level of Tuning

The heat range will change with the seasons.

When the air temperature is high, as in the summer, the inlet air temperature becomes higher, increasing the load on the engine. In times like this, it's better to choose a plug with a higher heat range.

The more horsepower is increased, the higher the required heat range.

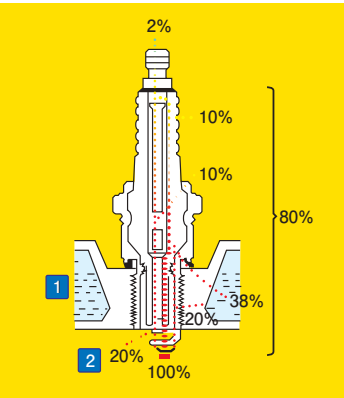
If the horsepower has been increased through tuning, the increase in explosive power leads to an increase in combustion chamber temperature, making pre-ignition more likely; in such cases it is necessary to choose a plug with a higher heat range and a higher level of heat resistance.

Glossary of spark plug terms

What is a spark plug's heat range ?

Spark plug heat dispersal

The degree to which a spark plug disperses the heat it receives is called its "heat range". Spark plugs with a high degree of heat dispersal are called high heat range (cold type) and those with a low degree of heat dispersal are called low heat range (hot type).

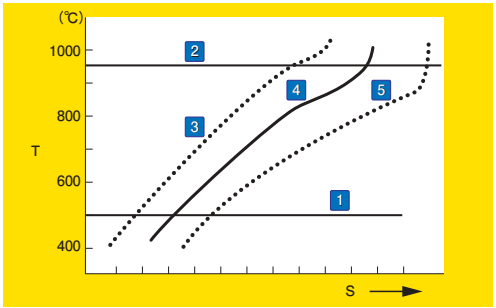


This is largely determined by the temperature of the gas inside the combustion chamber and the spark plug design.

1 Water
2 Cooled by intake air-tuel mixture

The relationship between the spark plug temperature and vehicle speed and heat range

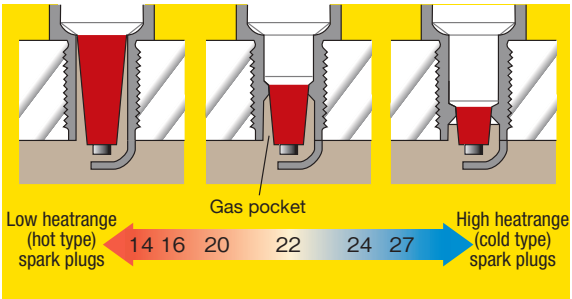
There are restrictions on the temperatures at which spark plugs can be used: the lower limit is the self-cleaning temperature and the upper limit is the pre-ignition temperature.A spark plug only functions completely when its center electrode temperature is between these temperatures of about 500C and 950C.



1 Self-cleaning temperature
2 Pre-ignition temperature
3 Low heat range (hot type) spark plugs
4 Standard spark plugs
5 High heat range (cold type) spark plugs
S: Vehicle speed T: Spark plug temperature (°C)

Low heat range and high heat range

Low heat range plugs have long insulator leg sections and the surface area affected by the flame and the gas pocket capacity are large. Also, since the heat release path from the insulator leg section to the housing is long, heat dispersal is low and the temperature of the center electrode rises easily.
On the other hand, high heat range plugs have short insulator legs and the surface area affected by the flame and the gas pocket capacity are small.
Also since the heat release path from the insulator leg section to the housing is short, heat dispersal is high and the temperature of the center electrode does not rise easily.



BASIC INFORMATION FOR PLUG (2)

04 Failure Modes of Spark Plugs

Condition	Normal	Carbon fouling	Oil fouling
Appearance			
	When using unleaded gasoline, the base of the insulator often becomes white or gray. The electrode may become slightly burned. When using leaded gasoline, the base of the insulator becomes light brown.	Dried carbon is deposited, covering the insulation base and electrode area.	The base of the insulator and electrode become shiny black, covered with oil or gasoline.
Engine	The engine runs in excellent condition when starting or driving, both at high or low speeds.	Engine startability worsens and "misses" at low speeds. If not corrected, the engine may die often and have poor acceleration. (Nearly 90% of engine trouble from spark plugs is caused by carbon fouling or oil fouling.)	Engine startability worsens and "misses" at low speeds. If not corrected, the engine may die often and have poor acceleration. (Nearly 90% of engine trouble from spark plugs is caused by carbon fouling or oil fouling.)
Causes		1. Inappropriate thermal value 2. Engine idling for a long time, or driving in low temperatures 3. Rich air-fuel mixture 4. Clogged air filter 5. Delay in ignition timing	1. Oil leakage into the combustion chamber due to frictional wear of the piston rings, valve guides, or cylinder wall. 2. Rich air-fuel mixture
Solve the problem		1 or 2: Use a spark plug with a thermal value that is one level lower, or adjust engine idling 3 to 5: Perform complete readjustment and tune-up	1. Spark plugs may become wet until the oil flow control becomes normal during pre-conditioning runs with a new engine or an engine immediately after an overhaul. In such cases, simply clean the plug and reinstall it. In other cases, the engine basically requires a complete overhaul. 2. Adjust the carburetor.

Condition	Overheating	Pre-ignition	Insulator breakage
Appearance			
	The base of the insulator will be burned and become bleach white from the heat. The electrode will also be burned and become white or dark purple. Electrodes will wear out soon.	The electrode will be melted. In extreme cases, the base of the insulator is also melted.	The base of the insulator has a vertical crack. The appearance of the spark plug is similar to problems with overheating or lead fouling.
Engine	Engine horsepower decreases and speed falls when running continuously at high speeds, driving for a long time uphill, or pulling too great a load.	This is caused by overheating. Temperatures in the combustion chamber increase rapidly, destroying not only the spark plug, but the piston head also.	Engine horsepower decreases and speed falls when running continuously at high speeds, driving for a long time uphill, or pulling too great a load.
Causes	1. Inappropriate thermal value of plug 2. Use of low octane gasoline 3. Ignition timing set too early 4. Inappropriate cooling 5. Poor air-fuel mixture	1. Inappropriate thermal value of plug 2. Use of low octane gasoline 3. Ignition timing set too early 4. Inappropriate cooling 5. Poor air-fuel mixture	1. Inappropriate thermal value of plug 2. Ignition timing set too early 3. Inappropriate cooling 4. Poor air-fuel mixture
Solve the problem	1. Use a spark plug with a higher thermal value 2. Use higher octane gasoline 3. Adjust the ignition timing 4. Check the cooling system 5. Adjust the carburetor	1. Use a spark plug with a higher thermal value 2. Use higher octane gasoline 3. Adjust the ignition timing 4. Check the cooling system 5. Adjust the carburetor	1. Use a spark plug with a higher thermal value 2. Adjust the ignition timing 3. Check the cooling system 4. Adjust the carburetor

The plugs configuration

φ12 × L26.5 × ⬡14
Thread diameter × length × Hex size

Iridium plug
Super ignition, φ12 long-reach shroud iridium plug

EX. FXE20HE11

- Super Ignition Plug
- The needle-shaped ground electrode of this revolutionary iridium plug features DENSO's own exclusive technology, resulting in an unparalleled reduction of quenching effect.
- Equipped as original parts on Nissan's TIIDA and NOTE
- φ12×L26.5×⬡14
- NISSAN

Iridium plug
Super ignition, long-reach iridium plug

EX. FK20HR11

- Super Ignition Plug
- By pairing an ultra-fine 0.55 mm diameter iridium alloy tip on the center electrode with a platinum tip on the ground electrode, this iridium plug will realize a very long lifetime.
- Equipped on Toyota's SIENTA and CROWN as genuine parts since 2003.
- φ14×L26.5×⬡16
- TOYOTA

Iridium plug
Super ignition, iridium plug

EX. FK16R11・FK16PR11

- Super Ignition Plug
- φ14×L19×⬡16
- TOYOTA
- MAZDA

Iridium plug
Long-reach iridium plug

EX. SK16HR11・SK20HPR-L11

- φ14×L26.5×⬡16
- Honda / Toyota

Iridium plug
New triple-electrode iridium plug

EX. SK20BR11・SK20BGR11

- Under normal operating conditions the main electrode sparks, but if it becomes fouled, side electrodes generate the spark to burn off any carbon - this plug is the optimum design for direct fuel-injection engines. Equipped as original parts for 3000 cc direct injection engines (D-4) on TOYOTA's CROWN and other models.
- φ14×L19×⬡16
- TOYOTA

Comparison Between Genuine DENSO and Fake Spark Plugs

Comparison of DENSO and Fake

Appearance

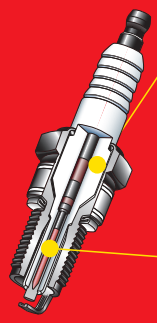
Terminal
Terminal has a glossy finish.

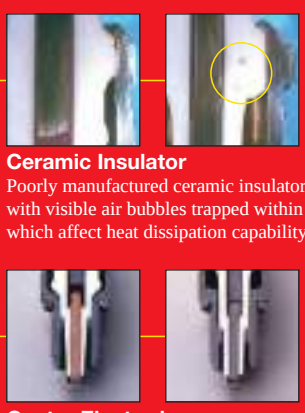
Markings
Printed wording can be scraped off.

Housing
Poor surface finish.

Screws & Electrode
Poor thread quality and finish.

Section





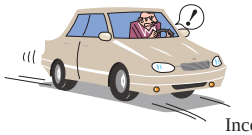
Ceramic Insulator
Poorly manufactured ceramic insulator with visible air bubbles trapped within which affect heat dissipation capability.

Center Electrode
A genuine DENSO spark plug has a copper-core center electrode with excellent heat conductivity. A fake DENSO spark plug does not, retaining heat that causes meltdown.

Problems Caused by Fake Spark Plugs

Problem 1

Fuel economy is diminished.



Inconsistent sparking causes incomplete combustion. Unburned fuel forms a black sooty deposit on the spark plug, eventually leading to poor fuel economy and poor start up of the engine.

Problem 2

Engine power drops on uphill roads and highways.

Poor heat dissipation due to the lack of a copper-core center electrode causes pre-ignition. As a result, engine power drops under highway driving or uphill driving conditions.

Problem 3

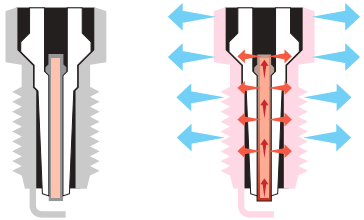
The plug melts down.

Continued usage of an overheated plug will damage the electrodes.

Why Power Drops and Melting Occurs

DENSO

DENSO plug contains copper core

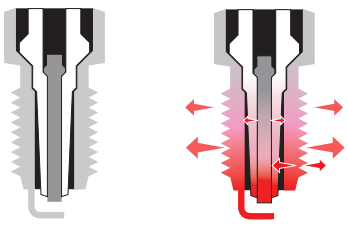


Quick heat dissipation.
opper is an excellent heat conductor. igh temperature heat is quickly dissipated away from the center-electrode to prevent melt down.

(See below)

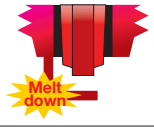
Fake

Fake plug is iron only

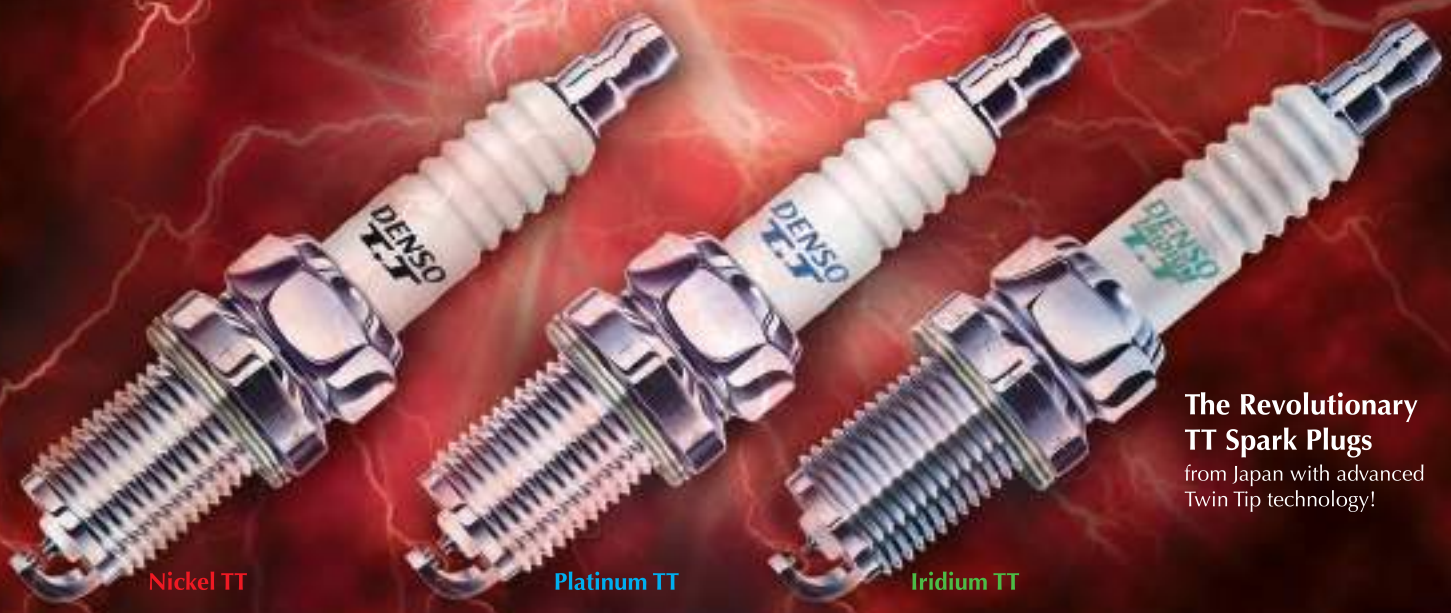


Slow heat dissipation.
Absence of a copper-core center electrode results in poor heat dissipation capability. Prolonged use causes power loss due to excessive heat buildup. This results in melt down of the ground electrode, eventually leading to serious engine damage.

Finally ...



TT REVOLUTION



The Revolutionary TT Spark Plugs
from Japan with advanced Twin Tip technology!

SPARK UP with the Twin Tip Range.

These spark plugs feature a 'twin tip' – a thin centre and a protruding ground electrode – to give you more sparks and enhanced ignitability! With an overall increased performance at a lower cost, experience a smooth and superior ride anytime, anywhere.

How Twin Tip Works

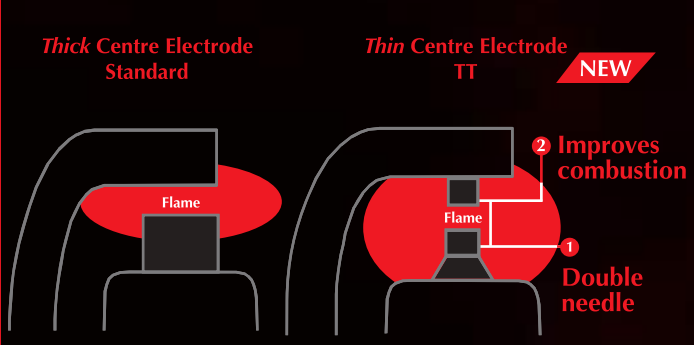


Illustration based on standard spark plug.

Benefits of Twin Tip

DENSO

www.denso.com.sg

TT REVOLUTION

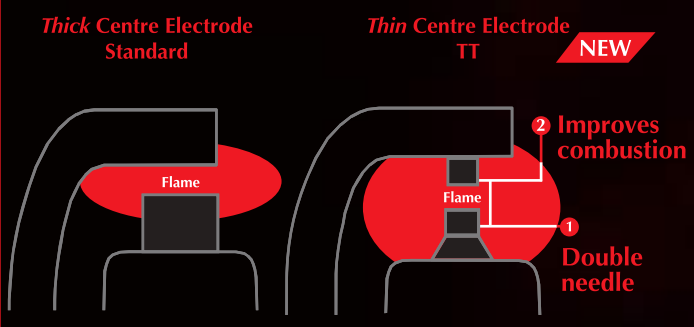
The Revolutionary Nickel TT Spark Plug
from Japan with advanced Twin Tip technology!

SPARK UP. More Savings.

This spark plug features a 'twin tip' – a thin centre and a protruding ground electrode both 1.5mm in diameter – which enhances the ignitability of your car. The faster you start your car, the more petrol you save!

With better performance at a lower cost, experience a smooth and superior ride anytime, anywhere.

How Twin Tip Works



Benefits of Twin Tip

Twin Tip Technology

- Fuel Savings
- Enhanced Speed
- Engine Efficiency
- Xtra Mileage

DENSO

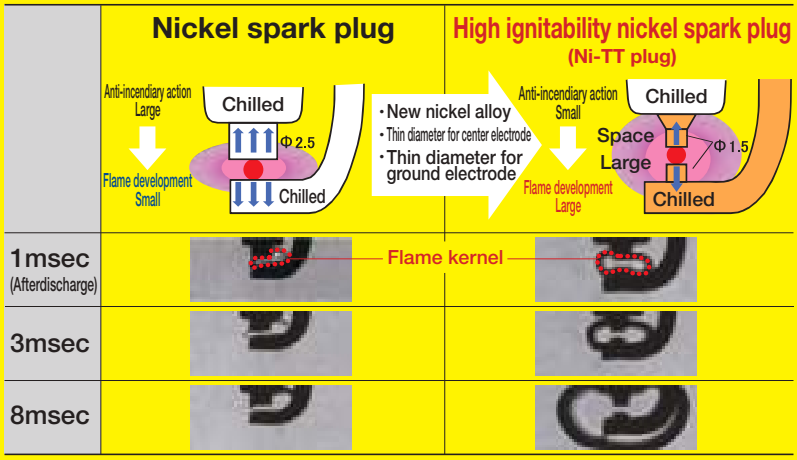
www.denso.com.sg

Recommended for anyone who wants a better Nickel spark plug

1 **Boosting flying sparks and ignitability**
- Thin center electrode (1.5mm)
- Double Needle structure (a first with nickel)
- Utilizes nickel alloy featuring new materials

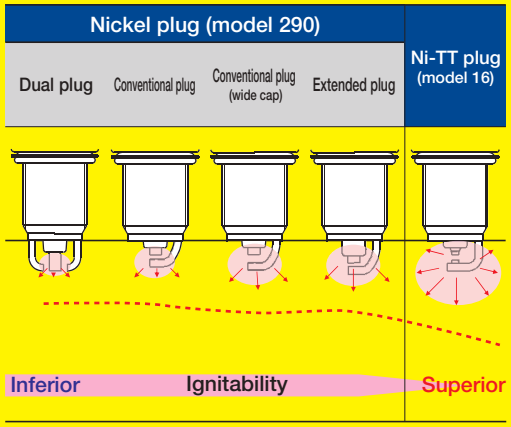
2 **Model consolidation : Model 290 ➡ Model 16**

High ignitability nickel plug impact of thin diameter on both sides of electrode



A new nickel alloy achieves thin diameter on both sides of the electrode, improving combustion by boosting flame development

Reasons why the Ni-TT plug can cover for other Nickel plugs

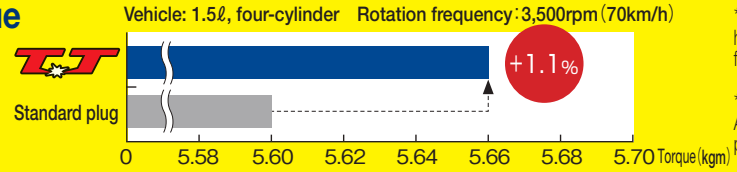


The Ni-TT plug can cover for other standard plugs thanks to its superior ignitability (flame kernel spreads easily).

Improves speed and output

1.1% improvement in torque boosts horsepower by 1.1*1

Improving engine torque means greater dynamism! Facilitates smooth driving even when subjected to a load--such as people or baggage--on top.



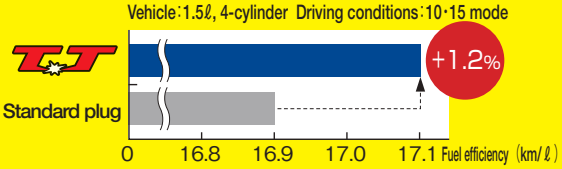
*1Horsepower calculation equation: horsepower=torque X rotation frequency x 0.001396

*All data is provided by DENSO. All references to standard plugs refer to DENSO products.

Improved fuel efficiency

Improves fuel efficiency by 1.2% ! The more you drive, the more economical it is!

Fuel efficiency is boosted by reliable ignitability. Fuel consumption is lowered, and the vehicle can run longer on the same amount of fuel.



* All data indicated is provided by DENSO. All references to standard plugs refer to DENSO products

Travel distance

Conditions: Fuel efficiency is improved by 1.2% by switching to the Ni-TT (10,000 km driving/year, fuel efficiency of 16.9 km/ℓ)

【 Conventional plug 】 10,000km÷16.9km= Approximately **591.7** ℓ

【 Ni-TT 】 10,000km÷17.1km=Approximately **584.7** ℓ

▼

7-liter difference over 10,000 km, translating to an additional 120 km of travel distance

REVOLUTION

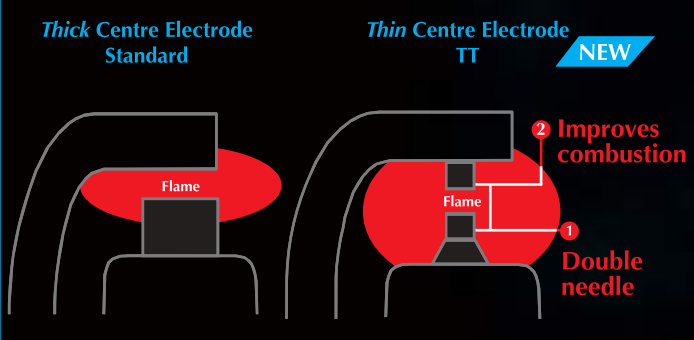
The Revolutionary Platinum TT Spark Plug
from Japan with advanced Twin Tip technology!

SPARK UP. Xtra Boost.

This spark plug features a 'twin tip' – a thin centre and a protruding ground electrode both 1.1mm in diameter – which enhances your engine's efficiency and extends the spark plug's shelf life.

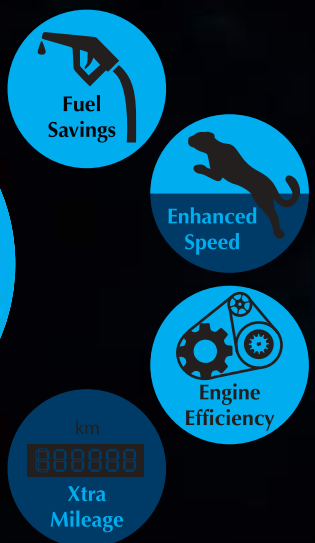
With improved performance at a lower cost, experience a smooth and superior ride anytime, anywhere.

How Twin Tip Works



Benefits of Twin Tip

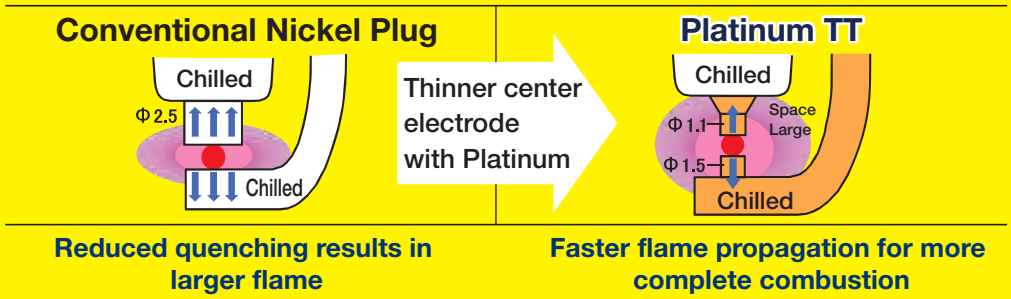
Twin Tip Technology



DENSO

www.denso.com.sg

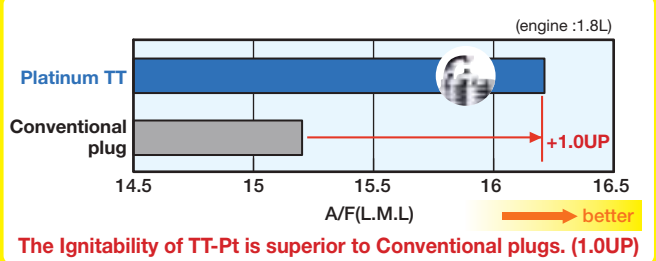
High Ignitability Platinum Plug



DENSO’s revolutionary Twin-Tip design is a combination of highly durable precious metals-Platinum and Titanium. The center electrode is created using an extremely durable platinum alloy that allows for the reduction of the tip size to 1.1mm in diameter, while maintaining the life of the plug. The Titanium-enhanced alloy on the ground electrode also increases durability, which is critical to minimize tip erosion and achieve the new Twin-Tip design.

Better Ignitability

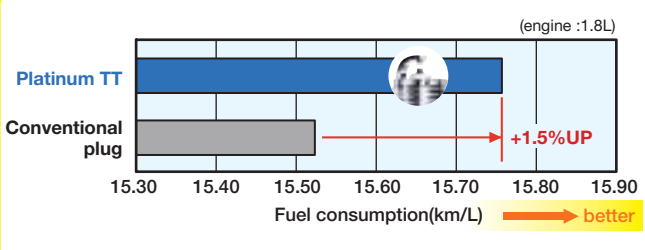
〈A method〉
Engine :1.8L 4cyl(1ZZ-FE)
engine speed:700rpm
Judgement of L.M.L :COV of combustion pressure exceed 25%
L.M.L :Lean misfire Limit
COV :coefficient of variation



The Ignitability of TT-Pt is superior to Conventional plugs. (1.0UP)

Better Fuel Consumption

Platinum TT is superior to Conventional plugs by 1.5%



Superior ignitability of the DENSO Platinum TT means more efficient combustion, which yields better engine performance in terms of power and fuel economy. Better mileage, more power, and faster starts, all while reducing carbon emissions are what places the platinum TT heads above the competition. Top performance, total value.

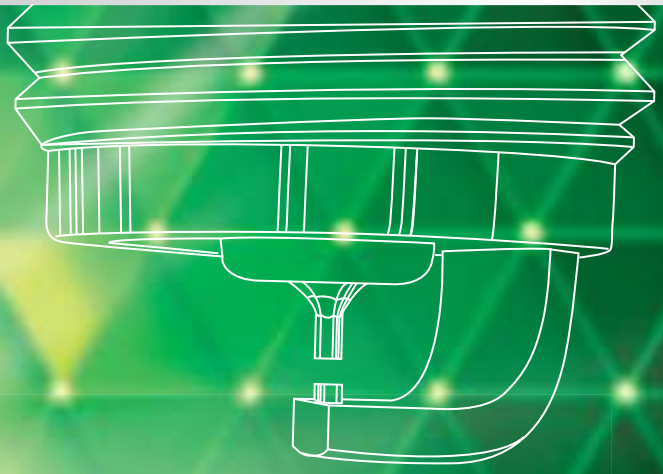
DENSO

www.denso.com.sg

ϕ 0.4mm DOUBLE NEEDLE IRIDIUM TT

0.4mm Iridium, only at DENSO!

0.4mm The world's finest diameter (as of March 2019)
with an iridium center electrode



The Finest TT plug with improved Acceleration Economical and long lasting!

ϕ0.4 mm iridium alloy & ϕ0.7 mm platinum needle alloy achieve high performance & high durability

DENSO has started to sell IRIDIUM TT spark plugs having a ϕ0.4 mm iridium alloy center electrode and a 0.7 mm needle-type platinum alloy ground electrode.

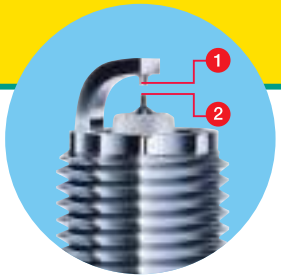
The quenching effect has been decreased by forming the electrode into a double needle shape. As a result, the flame kernel rapidly develops and the engine's power is drawn out to its maximum potential.

Resistor
Noise Reduction
5kΩ

Built-in, Highly Reliable Resistor
All specification types include an embedded, highly reliable, monolithic resistor to eliminate electromagnetic noise interference from all kinds of electronic devices.

LASER WELDING

360° Laser Welding
The iridium tip is mounted with an "All-around Laser Welding" method that insures high reliability and durability even under the most severe driving conditions.



1 ϕ0.7mm Needle-Shaped Platinum Ground Electrode
In order to maximally prevent quenching effect, the ground electrode needs to be made as small as possible. Traditional ground electrodes could not be made too small without reducing grounding strength or increasing electrode wear. However, we've managed to attach a fine 0.7mm-diameter platinum electrode using a 360° laser welding technique.

2 ϕ0.4mm Ultra-fine Iridium Center Electrode
Using DENSO's exclusive iridium alloy having a very high melting point, the tip of the center electrode can be shaped very thin and fine, reducing spark voltage requirements and greatly improving ignitability.

0.4mm
IRIDIUM

Flame Growth

The photograph shows flame reflected by the variation in density. Fig. 1 shows the results of studying the influence of electrode shape on flame growth, using the Iridium Spark Plug and IRIDIUM TT.
The photographs indicate that, in the case of the Iridium Spark Plug, the size reduction of the gap (from 1.1 mm to 0.6 mm) interfered with flame growth, while in the case of IRIDIUM TT, flame growth was ample and greater than that of the Iridium Spark Plug in spite of the narrowed spark gap (0.6 mm). These observations show that, as the results of the ignition/firing simulation indicated, a fine ground electrode can reduce required voltage because it enables the spark gap to be narrower, while realizing higher ignitability than the Iridium Spark Plug.

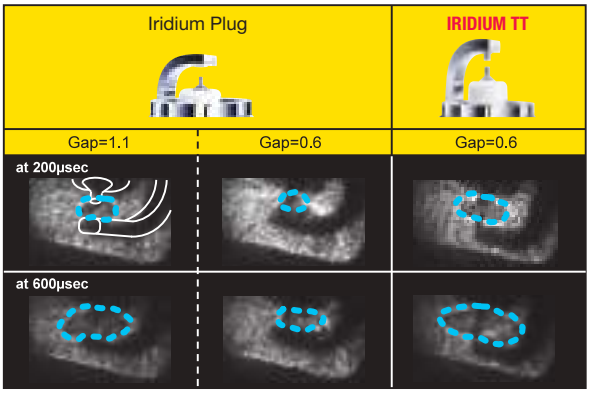


Fig.1 Electrode Shape's Effect to Flame Growth

Advantages of Fine Ground Electrodes

To lower the required voltage and improve firing performance. The most advanced technology in the world has been employed to enable use of electrode, at 0.4 mm in diameter, in the IRIDIUM TT.
The smaller the electrode the more concentrated the electric potential at the tip of the electrode and the stronger the electric field that affects required voltage and the lower the required voltage. As a result, combustion is good for all types of driving, the engine starts easily, and acceleration improves.
The above shows the strength of electrical field in case certain voltage changes on Iridium plug and IRIDIUM TT.
The more electrical field strength is getting high, the more it becomes easy to fire with low voltage.
*1 FEM(Finite Element Method analysis): General method to measure electrical field strength.

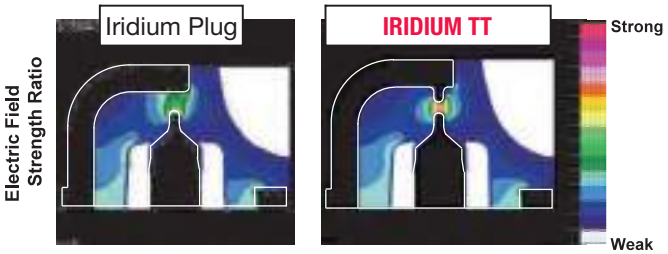

Fig.2 Electric Field Analysis (FEM)

Higher Ignitability

Fig. 3 shows the results of evaluating how the miniaturized-portion protrusion direction may influence the ignitability of an engine. The evaluation checked idle speed at equal throttle opening with the ISC (idle speed control) turned off. A higher idle speed represents higher ignitability.
This figure shows the results of evaluating IRIDIUM TT. This figure shows that IRIDIUM TT are superior to the Iridium Spark Plugs in ignitability.

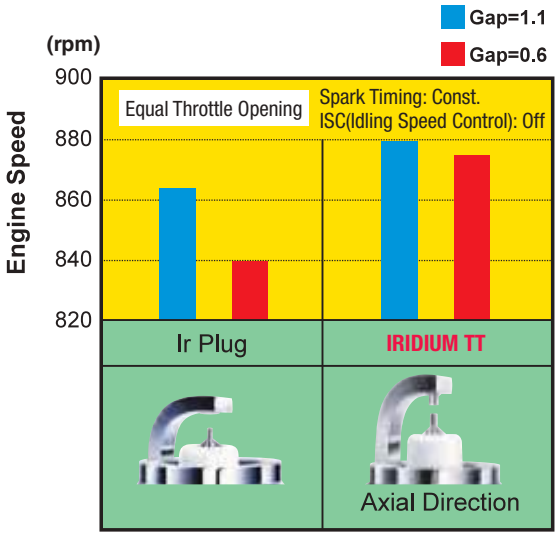

Fig.3 Influence of Miniaturized-Portion Protrusion to Ignitability

Better fuel efficiency

Fig. 4 shows the results of the examination of combustion variation and fuel consumption, using a 1,800-cc, four-cylinder engine. The evaluation was conducted by turning on the ISC and setting the average engine speed to 800 rpm (idling). The previously specified Type-1 of the IRIDIUM TT was used in this examination. Pmi COV (coefficient of variation) in the diagraph shows fluctuation in IMEP (indicated mean effective pressure). As this figure shows, IRIDIUM TT can reduce the Pmi COV approximately 3.1% and accordingly reduce fuel consumption by 2.4%, compared with the Iridium Spark Plug. These advantages are achieved because the miniaturization of the ground electrode enables better ignitability, improving combustion efficiency. Because the IRIDIUM TT is low in combustion variation and enables a reduction in idling speed, further improvement can be expected in fuel efficiency.

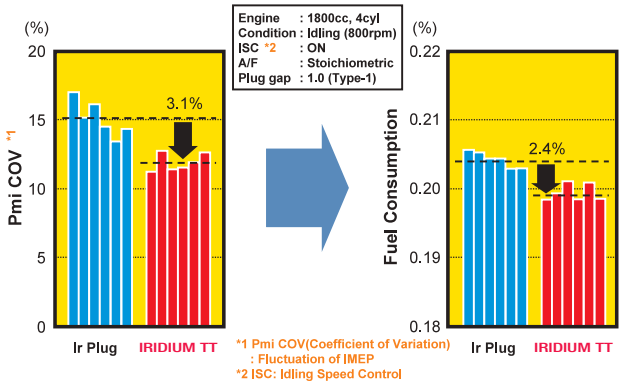

Fig.4 Better Fuel Efficiency

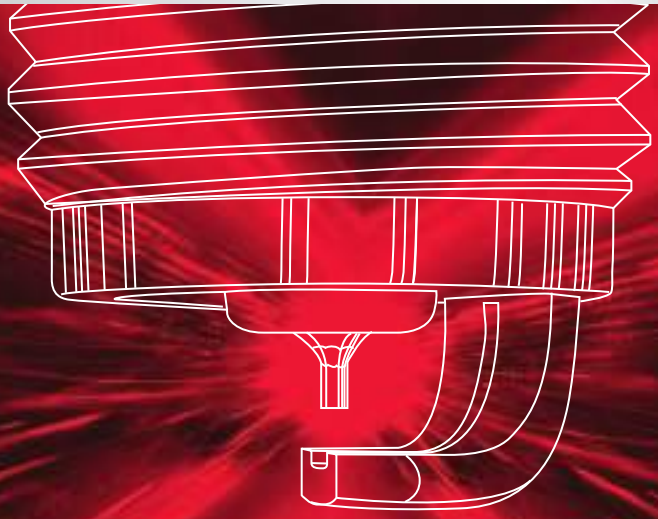
High Performance Spark Plug

IRIDIUM POWER®

0.4mm Iridium, only at DENSO!

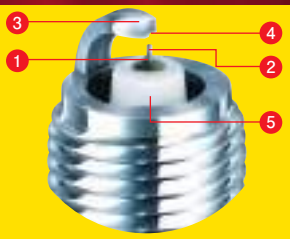
0.4mm The world's finest diameter (as of March 2019)
with an iridium center electrode



A next-generation plug that draws out engine evolution with a high-performance spark.

Improved acceleration!

Revving up plug performance with 0.4 mm!



Specifications Include Terminal
A terminal nut is attached that fits with most of the world's spark plug cables. Please remove the nut for installations that do not require one. (The terminal nuts on the IWM and IK-G types are solid parts and cannot be removed.)

Resistor
Noise Reduction
5kΩ

Built-in, Highly Reliable Resistor
All IRIDIUM POWER plugs include a highly reliable, 5,000 ohm monolithic resistor specification to reduce electromagnetic noise that may affect electronic devices. (For all plug types)

Burnished Nickel Plating

Highly Corrosion Resistant, Burnished Nickel Plating
The plug housing is plated with burnished nickel, the same as plugs used for racing. It is highly resistant to corrosion and rust even while touring in continually rainy weather and during motocross events. (Low-heat range types excluded)

LASER WELDING

360° Laser Welding
The process used to mount the iridium tip is a highly reliable "All-around Laser Welding" process that is able to withstand all kinds of driving conditions. (For all plug types)

1 Projected Center Electrode
In order to improve ignitability, the center electrode protrudes more than with conventional type plugs. This improves both acceleration response time and performance. (Only with: IU31, IUH24, IUH27, IX22, IX24, IX27, IUF22, IUF24, IWF22, IWF24, IWF27, IW24, IW27, IW29, IW31, and IW34)

0.4mm IRIDIUM

2 0.4 mm Diameter Ultra-fine Iridium Center Electrode
Using a new iridium alloy with a very high melting point, the tip of the electrode can be made very fine. This enables the reduction of voltage necessary to cause the spark, and greatly improves ignitability. Moreover, the special iridium alloy used was developed by DENSO

TAPERED CUT

3 Taper-cut Ground Electrode
The tip of the ground electrode is cut to a fine taper to reduce the adverse effects of quenching, which greatly improves fuel ignitability. Also, because of the streamlined, taper-cut shape, the fuel-air mixture spreads more evenly in the gap, resulting in steady, reliable igniting of combustion. (excluding IUF27A, IUF31A, IU24A, IU27A, IU31A, IY24, IY27 & IY31)

4 U-Groove Ground Electrode
The U-shaped groove on the ground electrode insures that the inside surface area is large enough to generate the flame kernel. This shape enables lower voltage needed to cause the spark and results in excellent ignitability without increasing the size of the spark gap. (excluding IUF27A, IUF31A, IU24A and IU31A)

5 Insulator Projection
The projection of the insulator is optimally designed based on each plug's thermal value. This corresponds to requirements unique to thermal value, such as self-cleaning ability at lower thermal values, and heat resistance at higher thermal values. (For all plug types)

Origin of Iridium: DENSO Iridium

A Long Time Ago...

Approximately 50 million years ago an asteroid, some 10km in diameter slammed into what is now Mexico's Yucatan Peninsula near the town of Chicxulub. The resulting dust cloud destroyed most living things and ended the dinosaurs reign on earth. The evidence for this has been known for some time, with the deposits of Iridium-rich clay found at the boundary of Cretaceous and Tertiary deposits (known as the K/T Boundary) all over the world.

On July 2 1992, Alan R. Hildebrand of the Geological Survey of Canada presented a scientific paper to the General Assembly of the Royal Astronomical Society of Canada entitled "The Cretaceous/Tertiary Boundary Impact". Some of his findings are summarized here.

The K/T boundary layer, sometimes known as the iridium bearing clay layer, has a global distribution and consists of at least two layers of impact material.

The upper layer, known as the Fireball layer averages 3mm thickness and represents 1500 cubic kilometers of debris deposited globally with no apparent variation in thickness.
The lower layer termed the ejecta layer, averages about 2cm in thickness.

A Major Impact on Earth?

Many scientists believe that the enormous impact put enough dust into the upper atmosphere to darken and hence cool the Earth for several years. This was theorized to result in shutting off global photosynthesis, with the resulting collapse of the global food chain. As a result nothing larger than 25 kg survived the boundary.

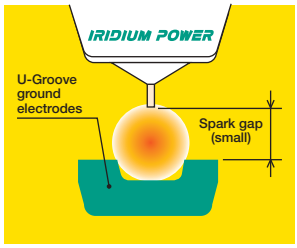
Iridium is found all over the world in the K/T layer and is not an unknown metal (commodity), however; its ability to be used in a manufacture type environment is unique. The current products that use Iridium are cellular telephones (Motorola), sunglasses (Oakley), and now spark plugs (DENSO). The reason for only a few companies using this precious metal is its difficulty to be manipulated in a cost-effective manner.

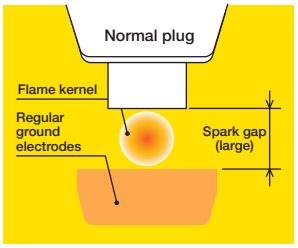
DENSO's experience with Iridium in the development of the complete line of original equipment platinum spark plugs helped in the development of the DENSO Iridium alloy, where the Iridium becomes the primary metal complimented by rhodium (Atomic Symbol: Rh) to increase oxidation wear resistance.

Ignitability That's a Cut Above

With DENSO's very own U-Groove ground electrode for better spark performance.

To increase ignitability, the important point is to let the flame kernel caused by the spark to grow to a large size. Normally, this can be accomplishing by widening the spark gap, however this causes spark voltage to increase, which has the opposite effect. IRIDIUM POWER® uses DENSO very own U-Groove ground electrode to realize a superb ignitability while maintaining spark voltage at low levels.



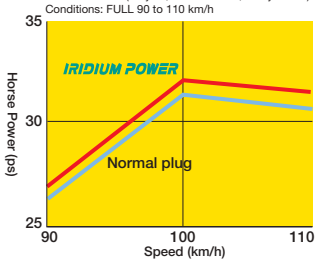


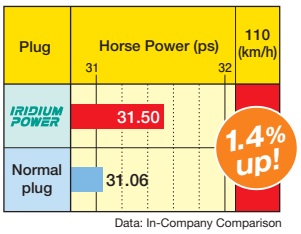
Improved Horse Power (1)

Get more power with an optimal fuel cycle.

IRIDIUM POWER® has a low required voltage and a high ignitability, resulting in less misfiring and no spark, the outcome being a dramatic improvement in combustion. Engine output is thus increased. The findings of a bench test using a motorcycle engine to show the improved combustion from IRIDIUM POWER® is shown on the below. Compared to normal plugs, a 0.5ps (1.4%) improvement is seen in output at 110 km/h.

Vehicle: 250 cc (2-cycle, water-cooled, V2 cylinders)
Conditions: FULL 90 to 110 km/h





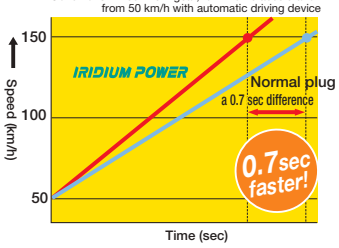
Data: In-Company Comparison

Improved Acceleration

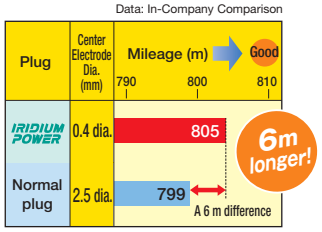
Increased response and acceleration performance.

IRIDIUM POWER® best demonstrates its performance improvement during acceleration. IRIDIUM POWER® has a 0.4 mm diameter iridium center electrode and a specially shaped ground electrode. These features combine to achieve higher ignitability and require lower spark voltage than ever before. This enables high-response driving with fewer misfires than under higher required voltage spark conditions, and fewer misfires when ignitability is difficult. As a result, acceleration improves in comparison with normal plugs.

Vehicle: 250 cc (2-cycle, water-cooled, V2 cylinders)
Conditions: Fixed in 6th gear, full throttle acceleration from 50 km/h with automatic driving device



Data: In-Company Comparison

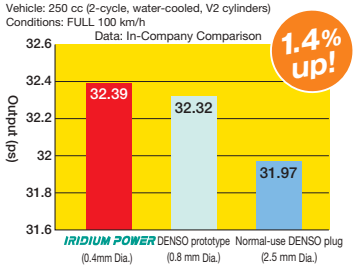


Improved Horse Power (2)

The 0.4mm center electrode increases output under various driving conditions.

The power produced by the 0.4mm dia. iridium center electrode is IRIDIUM POWER® unmatched by other plugs. The graph below compares the resulting power when IRIDIUM POWER® is installed compared to other high performance plugs. Using a 0.4mm dia. fine center electrode, there is more power compared to 0.8mm and 2.5 mm dia. plugs. This is what makes the difference in acceleration and in your lap time.

Vehicle: 250 cc (2-cycle, water-cooled, V2 cylinders)
Conditions: FULL 100 km/h
Data: In-Company Comparison



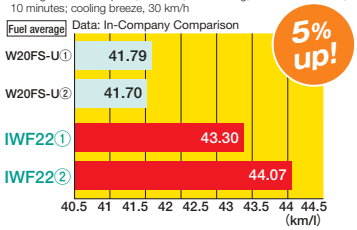
Improved Fuel Mileage

Even during idling ignition is assured, with less fuel consumption.

The good ignitability from the fine electrode (0.4 mm) of IRIDIUM POWER® draws out much more performance from the engine. Comparing a normal plug (W20FS-U) with an IRIDIUM POWER® (IWF22) on a 2-cycle 50cc engine, fuel consumption improved from 41.74 km/L → 43.69 km/L, an improvement of about 5%.

Note: Mileage measured using a chassis dynamo; actual driving results under normal conditions may vary.

Mileage Comparison Test
Testing vehicle: Honda DIO (2-cycle, single-cylinder, air-cooled, 50 cc)
Testing conditions: speed, 30 km/h; F/W 120 kg; measurement time, 10 minutes; cooling breeze, 30 km/h



IRIDIUM POWER® lineup

IKH series

IKH16. IKH20. IKH22
IKH24. IKH27

- φ14 mm ×L26.5 mm length long reach type.
- For Subaru 3 Liter, Nissan, Peugeot, Citroen, and Yamaha Marine.
- ***IRIDIUM TOUGH*** VKH16, VKH20, and VKH22 are also on sale.

IK series

IK16. IK20. IK22. IK24. IK27.
IK31. IK34

- Mainly used for cars. ISO type.
- φ14 mm ×L19 mm length type.
- IK22 and above are for tuned engines, with a spark gap of 0.8 mm.
- IK16G, IK20G, and IK22G have a solid, stainless steel gasket (mainly used with Honda engines).
- ***IRIDIUM TOUGH*** VK16, VK20, and VK22 are also on sale at the same time.
- IK□L is extended type (spark position 5 mm)

IK-L series

IK16L. IK20L

- φ14 mm X L19 mm X Hex 16mm.
- Extended Type The spark position is longer than IK20 by 2mm.
- KJ16CR-L11 / KJ16CR are substituted by IK16L
  KJ20CR-L11 / KJ20CR11 are substituted by IK20L (see this catalog for more substitution)

IK-G series

IK16G. IK20G. IK22G

- Mainly used for cars. ISO type.
- φ14 mm X L19 mm length type.
- IK22 and above are for tuned engines with a spark gap of 0.8 mm.
- IK16G, IK20G, and IK22G have a solid, stainless steel gasket (mainly used with Honda engines).
- ***IRIDIUM TOUGH*** VK16G, VK20G, VK22G are also on sale at the same time.

IQ series

IQ16. IQ20. IQ22. IQ24.
IQ27. IQ31. IQ34

- Mainly used for cars.
- φ14 mm ×L19 mm length type.
- IQ22 and above are for tuned engines, with a spark gap of 0.8 mm.
- ***IRIDIUM TOUGH*** VQ16, VQ20, and VQ22 are also on sale.

IW series

IW16. IW20. IW22. IW24.
IW27. IW29. IW31. IW34

- φ14 mm ×L19 mm length fully threaded type.
- IW16 to 22 are focused on ignitability with a 1.5 mm projection, whereas IW24 to 34 are focused on heat resistance with a projection of -1.5 mm.
- The spark position of IW24 to 34 is projected 0.5mm compared to normal (1.0 → 1.5 mm).
- Equipped with 0.4 mm diameter iridium center electrode for improved ignitability.
- ***IRIDIUM TOUGH*** VW16, VW20, and VW22 are also on sale.

IWM series

IWM24. IWM27. IWM31

- This type has a gasket face height shortened by approximately 10 mm from the IW Type.
- The ***IRIDIUM POWER*** version of the IWM01-□ Iridium Racing plugs.
- Sold as street-use plugs for 2-cycle 250cc sports bikes.
- For Honda NSR250, Yamaha TZ250R, Suzuki RGV250Γ (Gamma), Aprilia RS250, KTM260, 300, and 380 ('99 and later).
- Can also be used for water cooled kart engines.

IWF series

IWF16. IWF20.
IWF22. IWF24. IWF27

- φ14 mm ×L12.7 mm length short reach type.
- IWF27 utilizes the heat resistance of the iridium electrode to extend the spark position 0.5 mm (1.0 → 1.5 mm)
- Harnessing the low required voltage of the 0.4mm dia. iridium, the gap is wider than in standard types (0.7 → 0.8 mm). Ignitability is increased even further.

ITV series

ITV16. ITV20. ITV22. ITV24.
ITV27

- φ14 mm ×L25.0 mm length tapered seat, long reach type.
- For the Ford Focus, Mondeo, Escape, Chevrolet Blazer and Mazda Tribute.

ITL series

ITL16. ITL20

- φ14 mm ×L25.0 mm length tapered seat, long reach type.
- Designed so that the head of the plug is 6 mm higher than in the ITV.
- Use with Chrysler's PT Cruiser, Voyager, Dodge, Magnum for 2005 model years and later.

IT series

IT16. IT20. IT22. IT24. IT27

- φ14 mm ×L17.5 mm length tapered seat type.
- For use with GM, Ford, Citroen, Jaguar, Peugeot, Volvo, Mercedes- Benz, Lancia, Renault, Audi, and Mazda.
- ***IRIDIUM TOUGH*** VT16, VT20 are also on sale.

ITF series

ITF16. ITF20. ITF22. ITF24.
ITF27

- φ14 mm ×L11.2 mm length tapered seat type.
- For use with GM and Ford.

IRIDIUM POWER®

IXUH series

IXUH22. IXUH20I. IXUH22I

- φ12 mm ×L26.5 mm lenghth fully threaded type.
- The insulator is fully projected(1.5mm), creating greater heat range and greater ignitability.
- 16mm Hex
- Application: BMW Mercedes Benz Honda Mitsubishi Mazda Subaru Suzuki Daihatsu.
- ***IRIDIUM TOUGH*** VXUH22, VXUH20I, VXUH22I are also on sale.

IXU series

IXU22. IXU24. IXU27. IXU22I

- φ12 mm ×L19 mm length fully threaded type.
- The insulator is fully projected (1.5 mm), creating a wide heat range and greater ignitability.
- 16 mm Hex
- For use with small cars and imported motorcycles such as Ducati.
- ***IRIDIUM TOUGH*** VXU20, VXU22, VXU24, VXU22I are also on sale.

IX series

IX22. IX24. IX27

- φ12 mm ×L19 mm length fully threaded type.
- Using the high heat resistance of the iridium electrode, the spark position is projected 0.4 mm more than in standard types. (1.6 → 2.0 mm)
- Harnessing the low required voltage of the 0.4mm dia. iridium the gap is wider than in the standard types (0.7 → 0.8 mm). A further increase in ignitability.
- 18 mm Hex

IX-B series

IX22B. IX24B. IX27B

- φ12 mm ×L19 mm length fully threaded type.
- Compared to the IX type, the insulator projection is extended 0.9 mm (0.6 → 1.5 mm), resulting in a wider heat range.
- The spark position is projected 0.8 mm more than the IX type. (2.0 → 2.8 mm)
- 18 mm Hex

IXG series

IXG24. IXG27

- The Iridium Power versions of the 2 mm shroud type plugs (X24/27GPU) used by Honda.
- Applicable to CB400SS. An expansion of applications is planned.
- Applicable to Honda CB400SS, XR400RR, CL400/RS, XLR250R, CBX250S, FTR250, CBX400F, XR250R.

IU series

IU20. IU22. IU24. IU27. IU31. IU22D. IU24D. IU27D

- φ10 mm ×L19 mm length fully threaded type.
- Harnessing the low required voltage of the 0.4 mm iridium center electrode, the spark gap is wider than in normal type. A further increase in ignitability. (0.8 → 0.9mm)
- For motorcycles such as Yamaha and Kawasaki, also for Ferarri, Maserati, and Alfa Romeo.

IU-A series

IU24A. IU27A. IU31A

- φ10 mm ×L19 mm length fully threaded slant ground electrode type.
- Harnessing the low required voltage of the 0.4 mm dia. iridium, the gap is wider than in normal type (0.7 → 0.9 mm). Ignitability is greatly increased.
- By making this a single electrode, the spark location is stabilized compared to in normal types (double ground electrode), securing an ideal combustion condition.

IUH series

IUH24. IUH27

- φ10 mm ×L19 mm length half-threaded type.
- Using the high heat resistance of the iridium electrode, the spark position is extended 0.4 mm compared to standard types (1.6 → 2.0 mm)
- Use only with Honda

IUF series

IUF22. IUF24. IUF14-UB

- φ10 mm ×L12.7 mm length short reach type.
- Using the high heat resistance of the iridium, the spark position is extended 0.4 mm compared to standard types (1.6 → 2.0 mm)
- Harnessing the low required voltage of the 0.4 mm dia. iridium, the spark gap is wider than in normal types (0.7 → 0.8 mm). Ignitability is greatly increased.

IUF-A series

IUF27A. IUF31A

- φ10 mm ×L12.7 mm length short type.
- Ideal for Gorilla/ Monkey Racing.
- The ground electrode has a slant shape, reducing the thermal stress on it.

IY series

IY24. IY27. IY31

- φ8 mm ×L19 mm length tapered seat, half thread type.
- **The world's first 8 mm thread diameter iridium plug.**
- Can be used with Honda Smart Dio ('04-), VFR400, RVF400, Kitaco Monkey Head, and NR750.

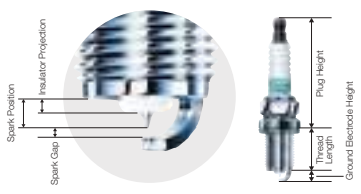
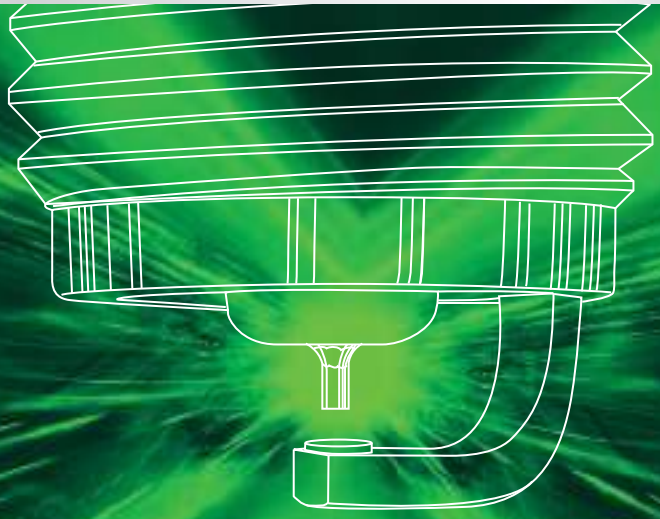
Spark gap example ..... For a 1.1 mm gap, set from 1.0 to 1.1 mm.
Insulator projection..... Length from edge of side housing to top of insulator.
The plus (+) direction is the distance from the edge to the piston head.
Spark position ..... Length from edge of side housing to top of center electrode.
The plus (+) direction is the distance from the edge to the piston head.
Ground electrode height..... Length from edge of side housing to top of ground electrode.
The plus (+) direction is the distance from the edge to the piston head.
Terminal shapes..... S: solid terminal, R: removable, RC: crimped nut, T: threaded
Note: Please purchase plugs equipped as original parts at stores that sell original parts.



High Performance Spark Plug

IRIDIUM TOUGH®

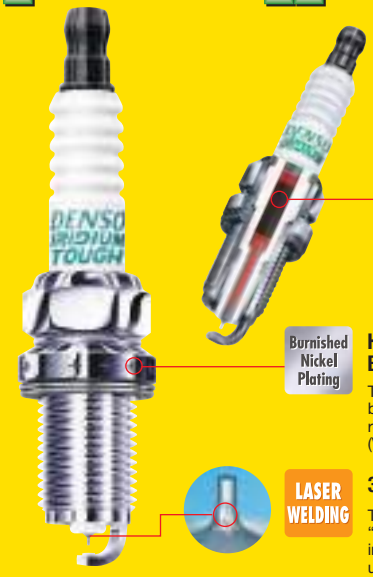
Iridium alloy fine center electrode



Lasting high performance, long life and high response

Economical and long lasting!

Fine diameter iridium alloy and platinum-tipped ground electrode achieve high durability!



Resistor
Noise Reduction
5kΩ

Built-in, Highly Reliable Resistor

All specification types include an embedded, highly reliable, monolithic resistor to eliminate electromagnetic noise interference from all kinds of electronic devices.

Burnished Nickel Plating

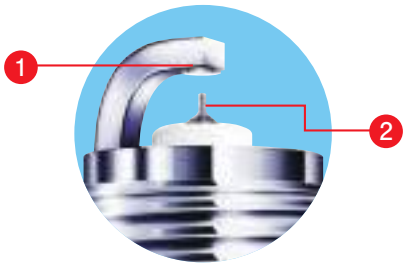
Highly Corrosion Resistant, Burnished Nickel Plating

The insulator housing is plated with burnished nickel the same as racing plugs, resulting in high corrosion resistance. (VKA and VKB excluded)

LASER WELDING

360° Laser Welding

The iridium tip is mounted with an "All-around Laser Welding" method that insures high reliability and durability even under the most severe driving conditions.



1 Platinum-tipped Ground Electrode

The ground electrode has a platinum tip, from DENSO's experience with platinum plugs. This greatly moderates electrode wear and insures high durability.

2 Fine Diameter Ultra-fine Iridium Center Electrode

Using DENSO's exclusive iridium alloy having a very high melting point, the tip of the center electrode can be shaped very thin and fine, reducing spark voltage requirements and greatly improving ignitability.

IRIDIUM TOUGH® is recommended for the following user.

For long distance and heavy-use drivers.

Because of its long lifetime, recommended to drivers for long driving.

By greatly minimizing electrode wear, DENSO improved mileage and extended the plug's useful life. Longevity provides you with peace of mind and safety when using IRIDIUM TOUGH®.

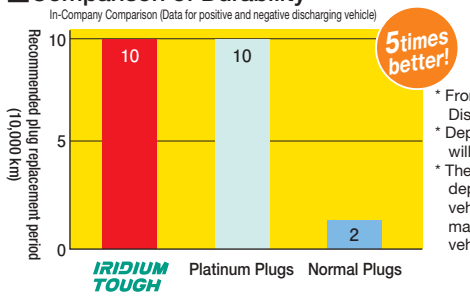
For drivers that care about mileage.

As I drive every day, so I want less fuel consumption.

If you use your car on a daily basis, you may be concerned about fuel consumption. IRIDIUM TOUGH® is one solution.

High Durability

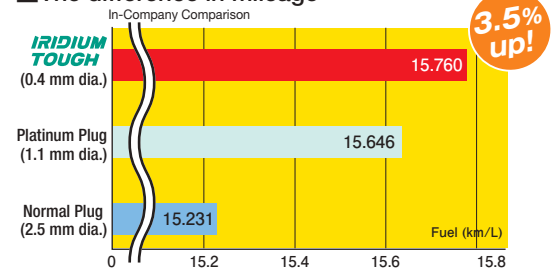
■Comparison of Durability



* From taxi monitoring test results. Displacement is mainly 2000 cc.
* Depending on the driving conditions there will be differences in endurance.
* The service lifetime of Iridium Tough will depend on operating conditions and the vehicles it is installed on. (Service lifetime may become shorter depending on the vehicle's ignition system.)

Improved Mileage

■The difference in mileage

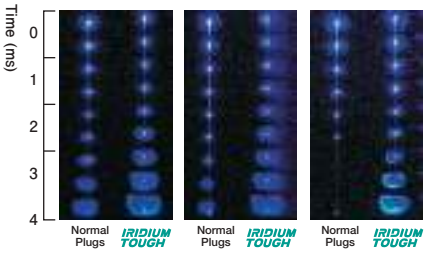


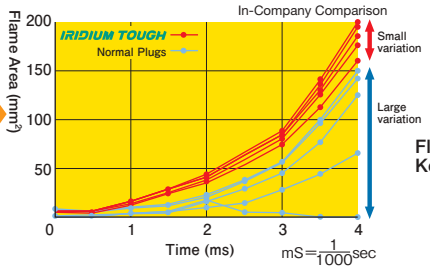
Vehicle: 2000cc, 6 cyl, 4 cycle
Driving Conditions: 60km/h on set ground

Improved Ignitability

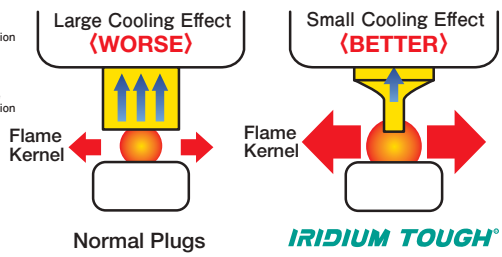
Realizing high ignition performance with a fine diameter electrode.

■Comparison of Flame Spread





■Promotion of Flame Kernel Growth

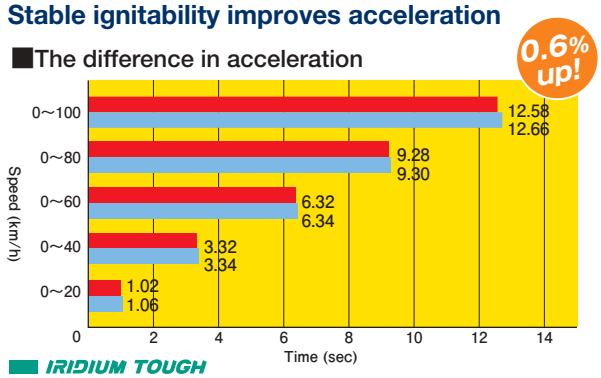


If the electrode dia. is fine, the cooling effect on the flame kernel is smaller.

Improved Acceleration

Stable ignitability improves acceleration

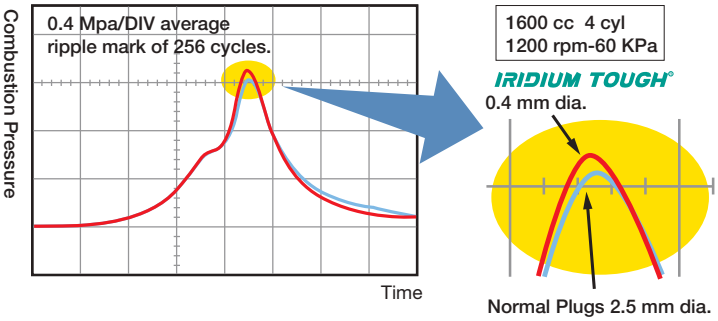
■The difference in acceleration



Vehicle: 2000cc, 4 cyl, 4-cycle
Driving conditions: Creeping (2nd)→ Full throttle (100km/h)

* The data shown is from internal studies. Also, the "Normal Plug" referred to here is a DENSO product.

■Comparison of Combustion Pressure



IRIDIUM TOUGH® will increase combustion pressure and engine output.

Spark gap example ····· For a 1.1 mm gap, set from 1.0 to 1.1 mm.
Insulator projection····· Length from edge of side housing to top of insulator. The plus (+) direction is the distance from the edge to the piston head.
Spark position ····· Length from edge of side housing to top of center electrode. The plus (+) direction is the distance from the edge to the piston head.
Ground electrode height····· Length from edge of side housing to top of ground electrode. The plus (+) direction is the distance from the edge to the piston head.
Terminal shapes····· S: solid terminal, R: removable, RC: crimped nut, T: threaded

IRIDIUM TOUGH® lineup

VFKH series

VFKH16·VFKH20

- World's first ϕ0.4 mm Double needle Iridium Tough.
- DENSO OEM needle technology used by Iridium Tough plugs on the market.
- Both electrodes are needle-shaped for better ignitability and wider heat range, coaxing the maximum power possible from your engine.
- ϕ14 x L26.5 x ⬡16.
- For Toyota, Lexus and Subaru

VFKBH series

VFKBH20

- World's first ϕ0.4 mm new-3 electrode double needle Iridium Tough.
- DENSO OEM needle technology used by Iridium Tough plugs on the market.
- Both electrodes are needle-shaped for better ignitability and wider heat range, coaxing the maximum power possible from your engine.
- ϕ14 x L26.5 x ⬡16.
- For Lexus, Toyota

VFXEH series

VFXEH20·VFXEH22

- World's first ϕ0.4 mm double needle Iridium Tough.
- DENSO OEM needle technology used by Iridium Tough plugs on the market.
- Both electrodes are needle-shaped for better ignitability and wider heat range, coaxing the maximum power possible from your engine.
- ϕ12 x L26.5 x ⬡14.
- For Nissan, AMG Mercedes, Renault, Peugeot, Citroen

VFXEH-E series

VFXEH20E

- World's first ϕ0.4 mm double needle Iridium Tough.
- DENSO OEM needle technology used by Iridium Tough plugs on the market.
- Both electrodes are needle-shaped for better ignitability and wider heat range, coaxing the maximum power possible from your engine.
- ϕ12 x L28.5 x ⬡14 (2mm shroud).
- For Nissan, Mazda, Mitsubishi, Mitsuoka

VKH series

VKH16·VKH20·VKH22·VKH20Y

- For Subaru
- For Peugeot
- For Citroen
- For NISSAN
- For Renault
- For Mitsubishi
- For TOYOTA
- For ISUZU
- For Mercedes Benz, and others
- Thread length: 26.5 mm

VK series

VK16·VK20·VK22·VK20Y·VK16G·VK20G·VK22G

- Mainly for automobiles and trucks
- ISO-compatible small plug
- ϕ14 x L19 x ⬡16.
- VK20Y has a gap of 0.8 and is mainly for use with turbo engine vehicles.
- VK16G, VK20G, and VK22G have a stainless steel gasket.

VQ series

VQ16·VQ20·VQ22

- Mainly for automobiles and trucks
- JIS-type Small plug
- ϕ14 x L19 x ⬡16.
- VQ22 can be used for upgrading performance if the gap is set to 0.8.

VKA series

VKA16·VKA20

- Corresponding to SK16BGR11, SK20BGR11 and PK20GR8
- Shroud-type
- Thread length: 22 mm
- For TOYOTA D4 engine
- For Mitsubishi GDI engine

VKB series

VKB16·VKB20

- Corresponding to SK16BR11 and SK20BR11
- Thread length: 19 mm
- For TOYOTA D4 engine
- For Mitsubishi GDI engine

VW series

VW16·VW20·VW22

- Mainly for automobiles and trucks
- ϕ14 x L19 x ⬡20.6.

VT series

VT16·VT20

- For Mercedes Benz
- For MAZDA
- For Ford and GM
- Tapered seat

VXUH series

VXUH22·VXUH20I·VXUH22I

- ϕ12 x L26.5 x ⬡16.
- Application:BMW,Mercedes Benz, Honda,Mitsubishi,Mazda,Subaru, Suzuki,Daihatsu.
- IRIDIUM POWER IXUH22 is on sale.

VXU series

VXU20·VXU22·VXU24·VXU22I

- Applicable for light vehicles
- ϕ12 x L19 x ⬡16.
- By fully projecting the insulator (1.5 mm), the heat range is widened and ignitability is improved.

VCH series

VCH16·VCH20

- Insulator Projection is 2.5mm
- Spark position is 4.0mm
- For Toyota
- ϕ12 x L26.5 x ⬡14.

VFK series

VFK16·VFK20F

- For Toyota,Honda,Mazda
- Thread length:19mm

VXEBH series

VXEBH27

- For Toyota 86,Subaru BRZ
- World first ϕ0.4 mm new 3elect road.
- ϕ12 x L26.5 x ⬡14.

VFXUHC series

VFXUHC22FG

- Corresponding to DXU22HCR-D11S (DENSO)
- Corresponding to DILZKR7B11GS (NGK)
- Shroud-type
- 28 mm reach (base length)
- For Honda Odyssey RB3/4 (except Absolute)

VXUHC series

VXUHC22G

- Corresponding to SXU22HCR8S (DENSO)
- Corresponding to ILZKR7B8S (NGK)
- Shroud-type
- 28 mm reach (base length)
- For Honda N BOX series (until October 2013)

VFXEHC series

VFXEHC22G

- ϕ12 x L28 x ⬡ 14 mm (1.5 mm shroud)
- Center electrode ϕ0.4 mm double needle Iridium Tough
- Corresponding to DXE22HCR11S (DENSO)
- Corresponding to DILZKAR7C11S (NGK) and ILZKAR7E11S (NGK)
- For Honda

VXEHC series

VXEHC24G

- ϕ12 x L28 x ⬡ 14 mm (1.5 mm shroud)
- Corresponding to SXE24HCR8S (DENSO)
- Corresponding to ILZKAR8F8S (NGK) and ILZKAR8H8S (NGK)
- For Honda

VFKB series

VFKB16

- ϕ14 x L19 x ⬡ 16 mm
- Center electrode ϕ0.4 mm double needle Iridium Tough
- Corresponding to FK16BR-AL8 (DENSO)
- For Toyota

VFCH series

VFCH16

- ϕ12 x L26.5 x ⬡ 14 mm
- Center electrode ϕ0.4 mm double needle Iridium Tough
- Corresponding to FC16HR8 and FC16HR-C9 (DENSO)
- For Toyota

VDKH series

VDKH22F

- ϕ14 x L26.5 x ⬡ 16 mm
- Center electrode ϕ0.7 mm double needle Iridium Tough
- Corresponding to DILFR7K9G
- For Lexus NX200t 2000 cc (8AR-FTC, T/C) and others

VDCH series

VDCH22F

- ϕ12 x L26.5 x ⬡ 14 mm
- Center electrode ϕ0.7 mm double needle Iridium Tough
- Corresponding to DILKAR8J9G
- For Toyota Auris 1200 cc (8NR-FTS, T/C) and others

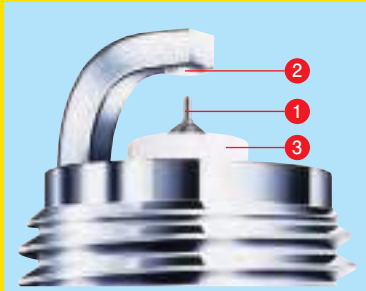
VSUEH series

VSUEH22

- ϕ10 x L26.5 x ⬡ 14 mm
- Center electrode ϕ0.7 mm Iridium Tough
- Corresponding to ILMAR7AR and LMAR7CI-8
- For Suzuki (R06A engine)

High Performance Spark Plug

IRIDIUM PLUS®



IRIDIUM PLUS® (Model: VK20T)

1 Fine Diamater Ultra-fine Iridium Alloy Center Electrode

2 Platinum-tipped Ground Electrode

The ground electrode has a platinum tip, from DENSO's experience with platinum plugs. This greatly moderates electrode wear and insures high durability.

3 High Strength Insulator

Using a high strength ceramic insulator for LPG engines improves strength by 20% over conventional insulators.

IRIDIUM PLUS® Specifications

Next Generation High Performance Plugs for Taxi

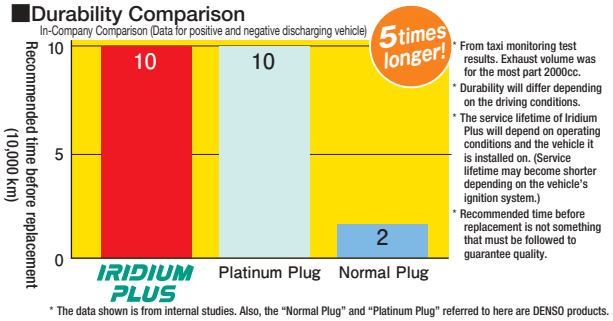
Economical spark plug with high durability, mileage, and acceleration performance.

Excellent Durability

Realizing astounding life and durability with platinum ground electrodes.

By welding a platinum tip to the ground electrode, wear has been controlled to a significant extent in the IRIDIUM PLUS®. In addition to acceleration performance, the life and durability of this plug has been increased to that of a platinum plug.

■Durability Comparison



* From taxi monitoring test results. Exhaust volume was for the most part 2000cc.
* Durability will differ depending on the driving conditions.
* The service lifetime of Iridium Plus will depend on operating conditions and the vehicle it is installed on. (Service lifetime may become shorter depending on the vehicle's ignition system.)
* Recommended time before replacement is not something that must be followed to guarantee quality.

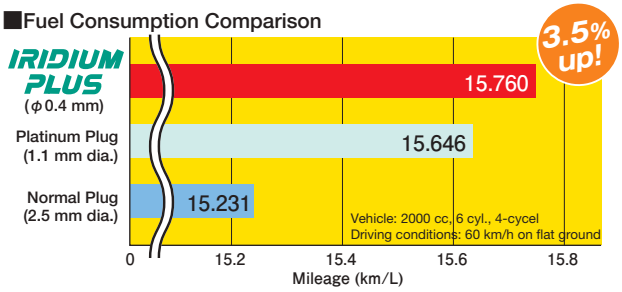
* The data shown is from internal studies. Also, the "Normal Plug" and "Platinum Plug" referred to here are DENSO products.

Improved Mileage

Less fuel consumption with a fine diameter center electrode.

Even during idling, when it is easy for ignition to degrade, IRIDIUM PLUS® reduces mis-sparking and stabilizes idling speed. This results in a quieter engine and improved fuel consumption.

■Fuel Consumption Comparison



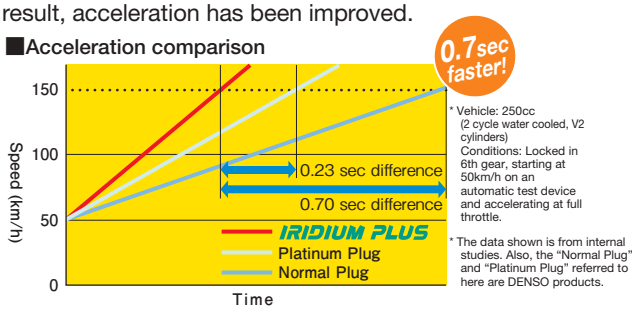
* The data shown is from internal studies. Also, the "Regular Plug" and "Platinum Plug" referred to here are DENSO products.

Improved Acceleration

Through steady ignitability, acceleration performance is greatly improved.

IRIDIUM PLUS®, through its fine diameter iridium center electrode, has realized high ignition performance and low spark voltage at levels heretofore unseen. Because of this, there is less non-firing under high spark voltage conditions and fewer misfires under conditions where ignition is difficult, permitting operation with a high level of response under a variety of conditions. As a result, acceleration has been improved.

■Acceleration comparison



* Vehicle: 250cc (2 cycle water cooled, V2 cylinders) Conditions: Locked in 6th gear, starting at 50km/h on an automatic test device and accelerating at full throttle.
* The data shown is from internal studies. Also, the "Normal Plug" and "Platinum Plug" referred to here are DENSO products.

High Performance Spark Plug

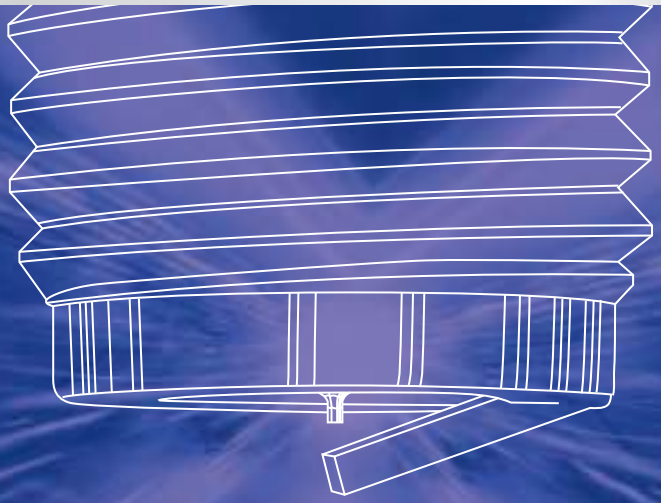
IRIDIUM RACING®

0.4mm Iridium, only at DENSO!

0.4mm

The world's finest diameter (as of March 2019)

with an iridium center electrode



Unbeatable spark technology fine-tuned for racing

Specifications Include Terminal

Included with the plug comes with a terminal nut compatible to the Nology Hot Wire and most plug cords around the world. Please remove for vehicle types that do not require terminals.
(Some plugs have solid terminals. Please refer to the list.)

Built-in, Highly Reliable Resister

Resistor
Noise Reduction

All IRIDIUM RACING plugs specify a resistor, and contain a highly reliable monolithic-type resistor that blocks noise that may affect electronic devices.
(IW06 has no resistor.)

Highly Corrosion Resistant, Burnished Nickel Plating

Burnished Nickel Plating

Burnished nickel plating on the housing, a high level of corrosion resistance has been realized. Also, because the amount on the threads is low, the damage to the female thread in the cylinder is reduced.

0.4 mm Diameter Ultra-Fine Iridium Center Electrode

0.4mm IRIDIUM

The center electrode tip is able to be made fine using a new iridium alloy with a high melting point. The required voltage is reduced, and ignitability is improved greatly.

1 All-platinum Ground Electrode

Compared to the nickel alloy used in conventional spark plugs, the high melting point of platinum will reduce such problems as ground electrode melting and wear. Also, the 0.8mm platinum alloy is welded on and gapped without any bending, reducing residual stress and increasing durability.

2 Insulators for Racing

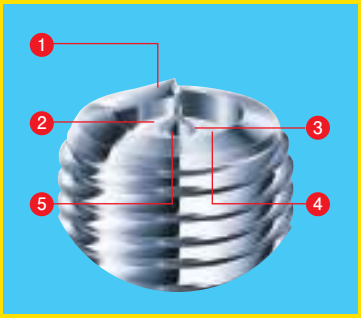
By using a new, strengthened insulator which was developed during numerous and repeated testing during racing trials, strength is improved by 20%.

3 Spark Cleaning Pocket

Between the center electrode and the insulator, a small pocket has been opened around the tip clearance. When there is carbon fouling or deposition, this part will discharge and burn off the carbon, restoring electrical resistance. This technology is patented by DENSO (Japan Patent No. 2727558).

4 Silicone Oil Coating

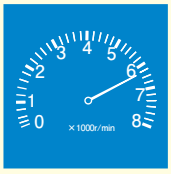
During the start of the race, non-starting from carbon fouling and carbon deposits can be fatal. To stop this, the insulator has been coated with a silicone coating. Using the water repellency of silicone, the insulator surface is isolated from moisture and carbon, preventing a decrease in resistance.



5 360° Laser Welding

The process used to join the iridium tip is a highly reliable "All-around Laser Welding" process that is able to withstand various kinds of driving conditions.

IRIDIUM RACING® is recommended for the following user.



Improve acceleration and engine power with IRIDIUM RACING®

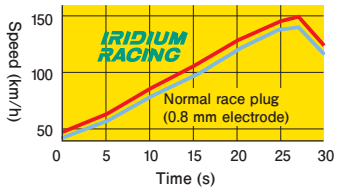
Reliability and durability, backed by the racing results of major drivers such as Sorberg, Stoner & Koyama

It's the age of iridium electrodes. Discover more acceleration with 0.4 mm DENSO Racing Plugs.
DENSO would like you to try the 0.4 mm IRIDIUM RACING® advantage.
Use IRIDIUM RACING® and experience a ride like never before.

Improved Acceleration

Unbeatable acceleration performance on the circuit.

With an ultra-fine, 0.4 mm diameter center electrode, IRIDIUM RACING® plugs are the realization of superb ignition performance and reguired voltage at unparalleled levels. Misfires have been controlled and will allow you to have steadily high levels of response and increased acceleration.



Time to reach 100 km/h (s)

0.3% faster!

Plug	13.9	14.0
IRIDIUM RACING	13.950	
Normal race plug (0.8 mm electrode)		13.985

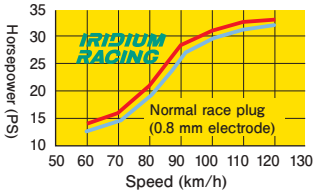
* The data shown is from internal studies. Also, the "Regular Racing Plug" referred to here is a DENSO product.

Vehicle: 250 cc (2-cycle water cooled, 2 cylinder) Conditions: WOT 60 to 129 km/h (locked in 6th gear)

Improved Horse Power

More power with an ideal combustion cycle.

Through superb ignitability and reguired voltage, non-firing and misfires under a variety of conditions has been greatly reduced. As a result, combustion conditions have improved dramatically, increasing enginen output.



Output (ps) [at 120 km/h]

1.3% up!

Plug	33	34
IRIDIUM RACING	33.92	
Regular race plug (0.8 mm electrode)		33.49

* The data shown is from internal studies. Also, the "Regular Racing Plug" referred to here is a DENSO product.

Vehicle: 250 cc (2-cycle water cooled, 2 cylinder) Conditions: WOT 60 to 120 km/h (locked in 4th gear)

How to Choose a Racing Plug

Warning: On choosing the right racing plug

- Generally, electrodes that project into the combustion chamber have better ignitability and have better performance. However, because of more exposure to high temperature combustion gases and because ground electrode becomes longer, heat resistance and durability decrease. The higher the level of tuning, the greater the need is to use a less projecting type.
- As the level of tuning is increased, so does the need for higher heat range.

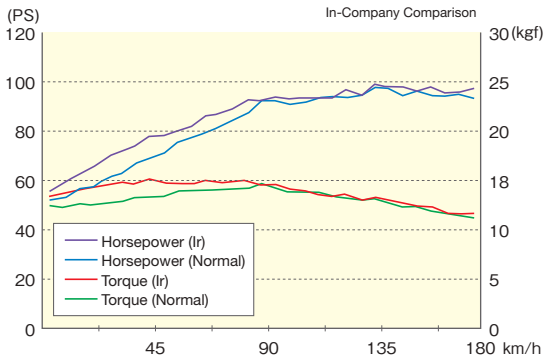
Q&A about Plug Performance

Q.1 Will output and torque increase if I use IRIDIUM POWER®?

A These are chassis dynamo test results comparing a Vitz 1300 using IRIDIUM POWER® and another which uses Normal plugs are shown below. With the normal plugs, the output is 98.2PS, while torque is 14.8 kgf; when this was changed to the IRIDIUM POWER®, the output was 99.3PS, while torque was 15.2 kgf. (This is approximately a 1.5% improvement in output.)



Q.2 Is there a standard for differentiating the uses of IRIDIUM POWER® and IRIDIUM RACING®?

A IRIDIUM RACING® uses a platinum tip for the ground electrode and a high strength fine insulator for racing. Also, there is a silicone coating on the insulator giving it an increased resistance to carbon fouling. However, because of the withdrawn spark position, the IRIDIUM POWER® has the high ignitability of the two. Instead, because of the "extension" in engine revolution felt by many at high revolutions, it is popular with customers who race. Choose "IRIDIUM POWER®" for response and "IRIDIUM RACING®" for high revolutions. IRIDIUM RACING® is particularly popular on the circuit scene.

Q.3 How does the engine respond to changed settings?

A We sometimes hear that "IRIDIUM POWER® is too sensitive to setting changes." However, the flip side to sensitivity is that "the response to setting changes is fast and easier," and during races, we hear that it makes setting changes easier. If IRIDIUM POWER® is used, it should become possible to draw out more performance from your vehicle.

D-1race

Q.4 Will my exhaust emissions be cleaner if I put on IRIDIUM POWER®?

A **Improved combustion efficiency will clean your exhaust emission! Fuel consumption will improve too!**

With the superior ignitability of ultra-thin electrodes (0.4 mm), combustion efficiency will be improved.

◎Cleaner Exhaust Emissions

CO and CO_2 levels will decrease in the "EURO III" emissions test to be implemented in the feature.

◎Improved Mileage

A great bonus for long-distance drivers.

Even for those who are concerned about the environment, we recommend Iridium Power.

■Iridium Plug Motorcycle Emissions Comparison Test

Test Vehicle: CBR250
Test Conditions: EURO III
Test Equipment: MEXA-7400, CVS 7100
Tested Plugs: U24FER9 (Ni Plug) Gap: 0.85
IUH24 (Ir Plug) Gap: 0.85

●EURO III Test Pattern (In-Company Comparison)

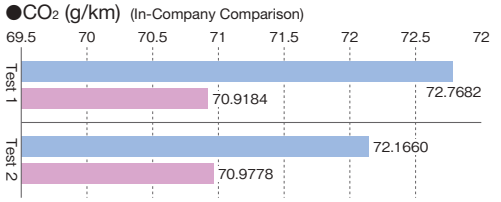
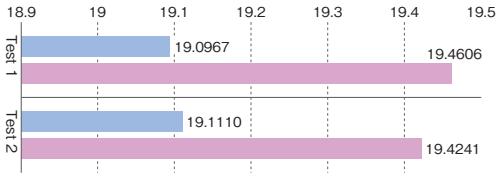
●CO_2 (g/km) (In-Company Comparison)



●Fuel Consumption (km/L) (In-Company Comparison)



Q&A about Plug Performance

Q.5 Can I replace my double, triple, or quadruple electrode plugs to IRIDIUM POWER® or IRIDIUM TOUGH®?

A This is possible. The reason: because of the fine center electrode in Iridium Power and Iridium Tough plugs, they have a lower spark voltage compared to double, triple, and quadruple electrode plugs. Please refer to the Standard Resistor Model Quick Chart.

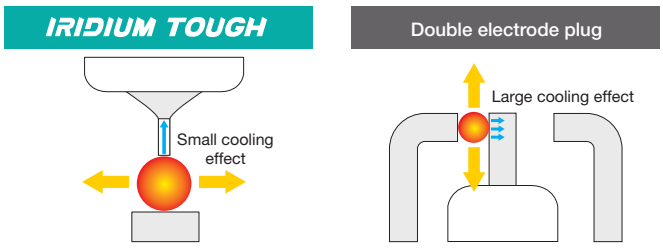
■Spark Voltage

The thinner the electrode is, the stronger the electrical field is. Because the electrical field affects spark voltage, a thinner electrode lowers spark voltage. If each type of electrode shape is modeled as shown below, Iridium Tough has a lower voltage than double electrode plugs.

		IRIDIUM TOUGH	Double electrode plug	Normal Plug
Plug				
Electrode model	Ground			
	Center	Plate and needle	Needle and sphere	Plate and plate
Reguired voltage		Low ←		→ High

■Ignitability

The more the contact area between the flame kernel and the electrode is minimized, the smaller the cooling action from the electrodes and the better ignitability is. Because of the fine center electrode, the contact area between the flame kernel and the electrode is small, resulting in excellent ignitability.



■Service lifetime of plugs

The service lifetime of a spark plug may be shortened due to driving conditions or ignition properties when used in a vehicle equipped with a simultaneous ignition system (plus-minus discharge and D-DL methods). Please ask your dealer to check if your vehicle is equipped with a simultaneous ignition system. The simultaneous ignition system fires the plug at the top dead center point not only of the compression stroke, but also the exhaust stroke.

Q.6 What kind of vehicles are surface gap plugs used for?

A These are plugs developed for racing, and there are many people who use these plugs in the All-Japan Road Race Championship JSB1000 class and in drag racing. Because the ground electrode is gone, there are the following advantages and disadvantages.

●Advantages

[1] When the engine is tuned so that the compression ratio is increased, these can avoid interference with the piston.
[2] Because there are no excess projections into the combustion chamber, the combustion efficiency at high revolutions is improved.
[3] Difficulties due to the ground electrode can be prevented.

●Disadvantages

[1] The ignitability becomes worse, and thus feeling and response at low and mid-revolutions deteriorates.
[2] For peak engine characteristics demanded under the most severe operating conditions. In the popular ST600 class, many drivers use a plug with a ground electrode.

Q.7 How is the compatibility with plug cords such as Nology?

A There are no particular issues with compatibility. In fact, there are some cord manufactures who sell products “especially for iridium plugs.”

Q.8 When changing plugs, is there any need to change the settings?

A For normal vehicles, there is no need to change the settings. It is advisable to reset vehicles with modified exhaust systems, though in most cases adjusting the air screw is sufficient. (Except for racing carburetors such as FCRs)

Q.9 Is there a way to tell them apart when replacing them?

A This can be done by confirming the level of wear (the gap width) on the ground electrode. DENSO’s Iridium electrodes are different from conventional products in that their center electrodes hardly wear, and because of this it is better to check for wear on the ground electrode.

Q.10 The vehicle seems to be running worse now that I’ve installed them?

A In most cases there is a problem with the vehicle. Scooters are often run for long periods of time without maintenance, and it is common to see them with richer fuel-air mixtures from dirty air cleaners. Our investigations have found that these vehicles tend to be susceptible to carbon fouling, and when replacing plugs also remember to inspect and clean the air cleaner. The effectiveness of the change should become even more apparent.

Q&A about Tuning Cars

Q.1 I have a 4AG engine NA tuned, with a Solex 44 dia. carburetor installed, giving a 200PS output. Which plug is good for a car such as this?

A DENSO has IRIDIUM POWER® and IRIDIUM RACING® to meet the needs of tuned and racing engines. For the engine described in the question, the right plug should be around IRIDIUM POWER® IK (IQ) 22, 24, or 27. Here is an introduction to using the different types of the Iridium Series on racing engines.

■ IRIDIUM POWER®: NA Tuned (Short distance racing), Turbo tuned where a regular turbine has been tuned to increase the boost.

■ IRIDIUM RACING® (01 Type): The 01 Type is usually called the slant ground electrode type. If your car is turbo tuned where the turbine has been replaced and the boost pressure is above 1.2 to 1.3 kg/cm^2, an IRIDIUM RACING® 01 type is needed. Also, if a NA tuned engine with comparatively high vibration (4 cylinders) is to be raced over long distances, switching to this type can increase the reliability of the ground electrodes.

■ IRIDIUM RACING® (02 Type): The 02 type (flat ground type) is appropriate for higher output engines than the 01 type, but because the spark position is withdrawn compared to the 01 type, only consider this plug for racing applications.

Q.2 I drive a GT-R tuned to 850HP. Would it be okay to install 0.4 mm dia. Iridium Power series plugs?

A The DENSO Iridium Series have the world's thinnest 0.4 mm iridium center electrodes, but because the durability of the iridium alloy developed by DENSO is higher that even platinum, which has in the past been said to be the most durable, it can be said that it's the best plug for tuned engines. Specifically, it has the following advantages:

[1] Iridium alloy has a melting point and hardness above that of platinum, even turbo, with its high combustion temperature, can be used with confidence. Also, even when used with powerful ignition systems such as MSD and MDI, these plugs are even more reliable than platinum racing plugs.

[2] The issue for high boost engines is that misfiring that occurs at high revolutions. The fine electrodes of the Iridium series require a lower voltage, allowing the energy generated by the coil to be sparked without losses. It can be said the 0.4 mm dia. DENSO IRIDIUM POWER® series are a strong ally of tuned high-boost turbo systems.

Q.3 What is the optimum heat range for a tuned up Golf4 GTI 1.8L Turbo?

(Tuning: Turbine Changed, High Volume Injector Installed, and ROM Adjusted to give an output of 200PS from 150PS.)

A It's difficult to give a heat range based on going from 150PS to 200PS alone, and it's best if you judge the condition of your current plugs and judge for yourself, but as a general rule, for boost pressures between 1.0 and 1.2 kg/cm^2, an IK24 should be sufficient. During the winter, IK22 should improve starting and low speed feel. The heat range is different depending on how the engine has been tuned and how it's used; using an increase in heat range of 1 or 2 as a starting point, decide on a heat range, always looking at the condition of your current plugs.

Q.4 Can an IRIDIUM POWER® be installed on an RX-7 (SA22C Turbo Model)?

A In the rotary engines in some old Mazda's on the T (Trailing) side there is a plug, the terminal nut for which must be removed. In others, the removal of the T side plug terminal nut is necessary as in the Cosmo (HB22S). DENSO has IRIDIUM RACING® for rotary engines, with a variety of heat ranges from #27 to #35. IRIDIUM RACING® for Rotary Engines come standard with terminal nuts.

Q.5 The plugs of racing karts are susceptible to carbon fouling, but how does IRIDIUM POWER® do in this case?

A We frequently hear that IRIDIUM POWER® is resistant to carbon fouling compared to plugs from other companies. However, there is no way that they are a 100% solution, and it's good to know these techniques to prevent carbon fouling.

[1] When rolling in the race, close the carburetor's low needle or pinch the fuel pipe with your hand to prevent excess fuel from entering the engine.

[2] By pumping the accelerator during rolling, a rich fuel air mixture goes into the engine, making it easier for carbon fouling to occur. Operate the accelerator gently.

[3] If carbon fouling happens while running with the throttle fully open, this could mean that the heat range is too low or that the fuel mix is to rich. Consult with a kart shop to find the optimum setting.

Q.6 Please advise us about selecting a plug for upgraded turbo engine vehicles.

A The following suggestions are only guidelines. First, regarding thermal value, if the boost pressure is 1.4 or lower, please choose No. 24. For thermal values of 1.5 or above, we recommend using No. 27. Thermal value may vary depending on the engine type and tuning, so please decide after checking the burned condition of the plugs.

Next, regarding the type of plug, if the boost pressure is 1.7 or lower, either IRIDIUM POWER® or IRIDIUM RACING® can be used. As a guideline, if you often drive with lower speeds or in town, IRIDIUM POWER® is recommended since it is resistant to carbon fouling. If you are racing in 400-meter runs or often drive at high speeds, we recommend IRIDIUM RACING®. When the boost pressure exceeds 1.7, it causes misfiring at high rpm. In such cases, it is necessary to use IRIDIUM RACING®.

Q&A about Motorcycles

Q.1 How is the compatibility with trial Motorcycle?

A The "IW series" is well suited for most trial vehicles. Though these vehicles frequently use a low heat range, the heat ranges available for IRIDIUM POWER® starts with IW16, so choose one that matches the type of driving you do. Better accelerator response and torque can be expected with IRIDIUM POWER®, which has excellent ignitability. Recently, with downsizing of the space to install plugs in trial vehicles, demand for miniature plugs is increasing. In these cases, try the IK types. However, the space between the plug cable and the insulator will require waterproofing.

Q.2 What is the difference in the life of an IRIDIUM POWER® used under 2-cycle conditions and one used under 4-cycle conditions?

A ●In 4-cycle engines, a spark is produced for every 2 revolutions of the crankshaft, resulting in explosion and combustion in the engine. ●In 2-cycle engines, a spark is produced for each revolution of the crankshaft, resulting in explosion and engine combustion in the engine.
This simple comparison may lead you to conclude that 2-cycle engines simply have twice the wear; however wear is made up of not only wear from sparking, but also wear from high temperatures (oxidation). Thus, the amount of wear depends on the driving conditions of the vehicle, how the rotations of the engine are applied (that is, how the shift is used), and whether the resulting combustion temperature is high or low.
2-cycle engines have a higher level of electrode wear. This electrode wear is estimated at approximately 1.5 to 2 times that of 4-cycle engines, and plug life is also shorter with 2-cycle engines. Iridium has a high melting point; however, it will undergo wear from sparking and wear from high temperatures (oxidation). To our knowledge, 2-cycle engines are only found in 2-wheel vehicles, our recommended value in this catalog for lifetime is 3000 to 5000km. (This value is based on a variety of conditions, and, racing use may require even more frequent replacement.) From the above, it is recommended that plugs for 2-cycle engines be replaced about every 3000km. However, the condition of wear depends on operating conditions and the typical engine rpms, so it is also possible to take out the plugs occasionally to confirm the amount of electrode wear and judge when the best time is to replace the plug.

Q.3 Is it true that installation on Ducati watercooled 4-valve engines is not possible?

A Since the 996R, the interior of the Testastretta (narrow head) engine's plug holes have been very narrowly machined, and with regular plug wrenches, the socket OD hits the wall and thus the plugs cannot be fully tightened. (Not possible with a 21.5mm OD) In this case, a thin-wall plug wrench is required. [We recommend the "NB3-16SP (nepros)" or the "B3A-16SP" by KTC.]

Q.4 The terminal on the end of the plug is frequently unnecessary on motorcycle, so why is this included with all types?

A IRIDIUM POWER® comes standard with a plug terminal (not including combined types). This is because some of the other companies' plug cords require a terminal, and at DENSO we decide our product specifications keeping in mind every customer.

Q.5 I see that IRIDIUM TOUGH® plugs, such as VUH27D and VK24PRZ11, are available for Honda vehicles. Will they last 100,000 km? Also, can IRIDIUM POWER® be substituted here?

A Plugs for motorcycle vehicles with a "V" in the part number have a platinum tip welded to the ground electrode, the same as in 4-wheel vehicles. They have more durability than Iridium Power, but do last 100,000 km. Thus we do not offer them as Iridium Tough products. You can choose the Iridium Power plug for those vehicle types with a compatible Iridium Power plug shown in the Model Chart; however, please understand that it will be not as durable.

Q.6 I installed IRIDIUM POWER® on to my motor cycle vehicle. Sometimes when I start it, there is a loud, explosive "pop." With regular plugs this did not happen. Why is the reason for this?

A A loud explosive "pop" pop sound can have the following two causes:
(1) An afterfiring muffler
(2) Backfiring due to blowback from the carburetor
If it is the same vehicle and these symptoms were not there before changing to the new plugs, the reason for this is (1) afterfiring. The causes of afterfiring are:
(1) An abnormally elevated intake pressure, the combustion becomes unsteady (during engine brake)
(2) A problem with an ignition device (improper ignition timing, misfiring)
(3) The fuel-air mixture is too rich (problem with the carburetor, too much choke)
(4) The valve timing is off
If the problem is during starting, (2), (3), or (4) are thought to be the reason. A specific example for (2) is "ignition timing that is off" and specific examples for (3) include "a dirty air cleaner" and "pulling the choke too much."
We often hear that Iridium plugs improve ignitability so much that people "don't have to pull the choke to start the engine." If you are pulling the choke to full, try pulling it to the "halfway" point and see if this solves the problem.

▶Spark plug color codes: ■ for Iridium Tough and Iridium Plugs and Iridium TT, ■ for Iridium Power, ■ for Iridium Racing and Two Tops Plugs, ■ for Platinum Plugs and Platinum TT, and black for general spark plugs.

注:
1、在安装火花塞时请确认与原车火花塞尺寸一致;
2、在安装时请严格按照火花塞标准力矩安装;
3、如出现点火不良可根据具体情况适当调节火花塞间隙;
4、奔驰新款双点火发动机不适合使用铱金火花塞;
5、火花塞热值可根据环境、季节、驾驶习惯、发动机改装、涡轮增压等适当提高一级热值;
6、高协调性发动机请直接使用长寿命火花塞。

(*4)GI means an SUS (stainless steel) gasket. Models without a G (Ex: VK16, etc.) are a steel gasket, so they cannot be used in this vehicle.

▶Spark plug color codes: ■ for Iridium Tough and Iridium Plugs and Iridium TT, ■ for Iridium Power, ■ for Iridium Racing and Two Tops Plugs, ■ for Platinum Plugs and Platinum TT, and black for general spark plugs.

(*4)GI means an SUS (stainless steel) gasket. Models without a G (Ex: VK16, etc.) are a steel gasket, so they cannot be used in this vehicle.

▶Spark plug color codes: ■ for Iridium Tough and Iridium Plugs and Iridium TT, ■ for Iridium Power, ■ for Iridium Racing and Two Tops Plugs, ■ for Platinum Plugs and Platinum TT, and black for general spark plugs.

(*5)The plug reach may be 19mm or 26.5mm even with the same engine and the same vehicle code.Please confirm the plug reach and choose the correct DENSO type. If there is an"H" in DENSO type,it has a reach of 26.5mm. If it doesn't ,its reach is 19mm.

▶Spark plug color codes: ■ for Iridium Tough and Iridium Plugs and Iridium TT, ■ for Iridium Power, ■ for Iridium Racing and Two Tops Plugs, ■ for Platinum Plugs and Platinum TT, and black for general spark plugs.

(*5)The plug reach may be 19mm or 26.5mm even with the same engine and the same vehicle code.Please confirm the plug reach and choose the correct DENSO type. If there is an"H" in DENSO type,it has a reach of 26.5mm. If it doesn't ,its reach is 19mm.

▶Spark plug color codes: ■ for Iridium Tough and Iridium Plugs and Iridium TT, ■ for Iridium Power, ■ for Iridium Racing and Two Tops Plugs, ■ for Platinum Plugs and Platinum TT, and black for general spark plugs.

(*5)The plug reach may be 19mm or 26.5mm even with the same engine and the same vehicle code.Please confirm the plug reach and choose the correct DENSO type. If there is an"H" in DENSO type,it has a reach of 26.5mm. If it doesn't ,its reach is 19mm.

▶Spark plug color codes: ■ for Iridium Tough and Iridium Plugs and Iridium TT, ■ for Iridium Power, ■ for Iridium Racing and Two Tops Plugs, ■ for Platinum Plugs and Platinum TT, and black for general spark plugs.

(*5) : It can be used only for a plug with a terminal. (*6) : The plug reach may be 19mm or 26.5mm even with the same engine and the same vehicle code. Please confirm the plug reach and choose the correct DENSO type. If there is an "H" in DENSO type, it has a reach of 26.5mm. If it doesn't, its reach is 19mm

▶ Spark plug color codes: ■ for Iridium Tough and Iridium Plugs and Iridium TT, ■ for Iridium Power, ■ for Iridium Racing and Two Tops Plugs, ■ for Platinum Plugs and Platinum TT, and black for general spark plugs.

(*5) : It can be used only for a plug with a terminal. (*6) : The plug reach may be 19mm or 26.5mm even with the same engine and the same vehicle code. Please confirm the plug reach and choose the correct DENSO type. If there is an "H" in DENSO type, it has a reach of 26.5mm. If it doesn't, its reach is 19mm

▶ Spark plug color codes: ■ for Iridium Tough and Iridium Plugs and Iridium TT, ■ for Iridium Power, ■ for Iridium Racing and Two Tops Plugs, ■ for Platinum Plugs and Platinum TT, and black for general spark plugs.

⚠CAUTION:

In Asia Market(Except Japan), use extended type Iridium Power IK16L and IK20L instead of IK16 and IK20.
No extended type Iridium Tough is available.
Concerned cross reference and Denso Normal to Iridium Power chart are shown below.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(*6) Purchase via DAIHATSU.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(*3) MITSUBISHI lean burn excluded.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(*6) Purchase via DAIHATSU.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(*3) MITSUBISHI lean burn excluded.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

(1) This comparison chart does not guarantee capability with any vehicle. Please use it for reference only. (2) Plug specifications (design, materials, etc.) varies according to manufacturer. (3) Choose your plug model by referring to the vehicle model compatibility table. (4) When choosing a plug model for tuning vehicles and vehicles not listed in the vehicle model compatibility chart, the customer is responsible for determining the correct plug.

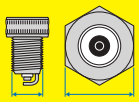
IDENTIFYING DENSO PLUGS

Iridium Plugs / Platinum Plugs / Normal Plugs

F	K	20	H	R		11
S	XU	22		PR	-A	9
	KJ	20		CR	-L	11



Type of precious metal

D ···· 0.7 mm diameter iridium with needle type platinum
F ····· 0.55 mm diameter iridium with needle type platinum
P ····· 1.1 mm diameter platinum with platinum tip
S ····· 0.7 mm diameter iridium with platinum tip
SV,V · 0.4 mm diameter iridium with platinum tip
Z ····· 0.55 mm diameter iridium with platinum tip

Thread Diameter and Hex Size

C ····· 12×14.0
L ····· 18×22.2 (Reach: 12.7 mm)
M ····· 18×25.4 (Reach: 12 mm)
MA ····· 18×20.6 (Taper seat, Reach: 12 mm)
MW ····· 18×20.6 (Reach: 12 mm)
J ····· 14×20.6 (Projected plug)
K ····· 14×16.0 (Miniature plug)
KJ ····· 14×16.0 (Projected Miniature plug)
LP ····· 14×20.6 (Plug for LPG applications)
Q ····· 14×16.0 (Miniature plug)
QJ ····· 14×16.0 (Projected Miniature plug)
QL ····· 14×20.6 (Miniature long cylinder housing plug)
S ····· 14×20.6 (Surface gap plug(for RE engines))
T ····· 14×16.0 (Taper seat)
W ····· 14×20.6
····· 14×19.0 (Compact type)
X ····· 12×18.0
XE ····· 12×14.0
XU ····· 12×16.0
N ····· 10×16.0
U ····· 10×16.0
Y ····· 8×13.0

Heat Range

DENSO	NGK	CHAMPION	BOSCH
4			
9	2	18	10
14	4	16,14	9
16	5	12,11	8
20	6	10,9	7,6
22	7	8,7	5
24	8	6,63,61	4
27	9	4,59	3
29	9.5	57	
31	10	55	2
32	10.5	53	
34	11		
35	11.5		

Reach

A ····· 19.0 mm (Spark position: 7.0 mm) J16AR-U11
A ····· 21.5 mm S29A
B ····· 19.0 mm (Spark position: 9.5 mm) J16BR-U
C ····· 19.0 mm (Spark position: 5.0 mm) KJ20CR-L11
D ····· 20.5 mm (Shroud 2) K20DTR-S11
E (With gasket) ···· 19.0 mm W16EX-U
E (With gasket) ····· 20.0 mm W25EBR
E ····· Shroud 2.0mm FXE20HE11
F ····· 12.7 mm W20FP-U
FE ····· 19.0 mm (Half thread) U24FER9
G ····· 22.0 mm (Shroud 3.0) PK20GR8
G ····· 21.8 mm (Shroud 2.8) X27GPR-U
H ···26.5 mm K16HPR-U11
H ····· 19.0 mm (Spark position: 8.5 mm) QJ16HR-U
L ····· 11.2 mm W14L
N (Taper seat, Half thread) 17.5 mm T20NR-U11
V (Taper seat) ···· 25.0 mm PT16VR13
None ···9.5 mm W14M-U
11.2 mm L14-U, M24S
19.0 mm SK20R11
21.5 mm S29A
None (Taper seat) ····· 8.3 mm T20M-U
11.2 mm W14L

Shape (Type)

A ····· Double ground electrodes W22EA
AY ·· Double ground electrodes with bent shape J16AY
B ···· Triple ground electrodes W22EB
BG ·· Triple ground electrodes (shroud) SK20BGR11
C ···· Shroud 1.5mm SXU22HCR11
D ···· 4 ground electrodes W27EDR
D ···· Projected (1.5 mm projection, spark position 3.5 mm) XU22HDR9
K ···· Projected (1 mm projection) W16EKR-S11
LM ·· Compact type (Hex 20.6 mm) W14LM-U
M ···· Shortened insulator head length W27EMR-C
M ···· Compact type (Hex 19.0 mm) W20M-U
P ····· Projected (1.5 mm projection) W16EP-U
Q ···· Projected 2mm, Spark position 3.5mm
R ···· 5Kohm resistor K16R-U
S ····· Non-projected (0 mm Projection) W22ES-U
S ····· Iridium on a single side KJ20SR11
T ····· Double ground electrodes K16TR11
TM · Double ground electrodes K22TMR11
TN ·· Double ground electrodes K22TNR-S
X ····· Fully projected (2.5 mm Projection) W16EX-U

Shape (Type)

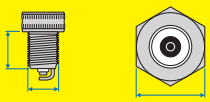
-A ··· Special specification SK16PR-A11
-B ··· Special specification K16PSR-B8
-C ··· Cut-back ground electrode W27EMR-C
-D ··· Copper-core Ground DK20PR-D13
-E ··· Special specification SK16PR-E11
-F ··· Special specification SK16PR-F11
-G ··· Grease applied on to threads, for CNG SK20R8-G
-GL · Platinum center electrode X22EPR-GL
-L ··· Heat resistant ground electrode K20PR-L11
-L ··· 3.5 mm projected insulator for motorcycles W20FP-UL
-L ··· Retracted insulator for motorcycles W20FR-L
-M ·· Larger ground electrode SK20PR-M11S
-N ··· For Yamaha and Kawasaki U27ESR-N
-P ··· Double Platinum Ground Electrode SK20R-P11
-P ··· Single-sided platinum plug K16PR-P11
-R ··· 10K ohm resistor K22PR-UR
-S ··· Semi-surface gap discharge type W20EP-S11
-S ··· Stainless gasket U27FER9S
-T ··· For LPG SK20HR8-T
-T ··· Special specifi cation FK20HBR11-T
-TP · Taper-cut, single-side platinum plug K20PR-TP11
-U ··· U groove ground electrode K16PR-U
-US Star-shaped center electrode W20M-US
-V ··· 1.3 mm diameter, nickel center electrode W27ES-V

Gap

5 ····· 0.5 mm (.020˝)
8 ····· 0.8 mm (.032˝)
9 ····· 0.9 mm (.035˝)
10 ····· 1.0 mm (.040˝)
11 ····· 1.1 mm (.044˝)
13 ····· 1.3 mm (.050˝)
14 ····· 1.4 mm (.055˝)
15 ····· 1.5 mm (.060˝)
<None> Cars: 0.8 mm
M/C: 0.7 mm
<Exceptions> P16R, PQ16R, PQ20R are 1.1 mm

IRIDIUM POWER® Series (Power, Tough, Plus) & T.T.

I	U	27	A
VF	KH	20	



High Performance Plug

I ····· 0.4 mm diameter iridium <POWER>
V ····· 0.4 mm diameter iridium with platinum tip <TOUGH>
VF ··· 0.4 mm diameter iridium with 0.7 mm needle type platinum tip <TOUGH>
VD ·· 0.7 mm diameter iridium with 0.7 mm needle type platinum tip <TOUGH>
P ····· 1.1 mm platinum center electrode

Thread Diameter, Reach, and Hex Size

<Thread Diameter × Reach × Hex Size> (mm)
K ····· 14×19.0×16.0
KB ··· 14×19.0×16.0 (New Triple Electrodes)
KA ··· 14×22.0 (Shroud 3.0)×16.0 (New Triple Electrodes)
KD ··· 14×20.5 (Shroud 1.5)×16.0
KH ··· 14×26.5×16.0
KBH · 14×26.5×16.0 (New Triple Electrodes)
Q ····· 14×19.0×16.0
W ···· 14×19.0×20.6
WF ··· 14×12.7×20.6
WM ·· 14×19.0×20.6 (Compact Insulator)
T ····· 14×17.5 (Taper Seat)×16.0
TF ···· 14×11.2 (Taper Seat)×16.0
TL ···· 14×25.0 (Taper Seat)×16.0 (Long Insulator)
TV ··· 14×25.0 (Taper Seat)×16.0
XU ··· 12×19.0×16.0
XUH · 12×26.5×16.0
CH ··· 12×26.5×14.0
XEH · 12×26.5×14.0
XEBH · 12×26.5×14.0 (New Triple Electrodes)
X ····· 12×19.0×18.0
XG ··· 12×21.8 (Shroud 2.8)×18.0
U ····· 10×19.0×16.0
UF ··· 10×12.7×16.0
UH ··· 10×19.0 (Half Thread)×16.0
NH ··· 10×19.0 (Half Thread)×16.0
Y ····· 8×19.0 (Half Thread)×13.0

Heat Range

DENSO	NGK	CHAMPION	BOSCH
16	5	12,11	8
20	6	10,9	7,6
22	7	8,7	5
24	8	6,63,61	4
27	9	4,59	3
29	9.5	57	
31	10	55	2
32	10.5	53	
34	11		
35	11.5		

Shape (Type)

A ····· Slant electrode, No U-Groove, No taper cut
B ···· Projected insulator (1.5 mm)
C ···· No U-Groove
D ···· No U-Groove
E ····· Shroud: 2 mm
ES ·· Stainless steel gasket
F ····· Special
G ···· Stainless steel gasket, Terminal one type
I ····· Spark position: 4 mm Projected insulator (1.5 mm)
J ····· Spark position: 5 mm
K ···· Spark position: 4 mm Projected insulator (2.5mm)
L ····· Spark position: 5 mm
T ····· For LPG applications<PLUS>
TT ··· TT series
Y ····· 0.8 mm gap
Z ····· Taper cut

SENSATIONAL POWER

Trust Denso's world-class technology to give you the best performance.

60 ANNIVERSARY since1959

Copyright © STI

Next-generation spark plug that exudes latent engine power with its high-performance spark.

IRIDIUM POWER®

Superlative performance, long life, and high response.

IRIDIUM TOUGH®

Unbeatable spark technology, fine-tuned for racing.

IRIDIUM RACING®
